

# **STKI Israeli IT Market Study & Trends 2023**

**Galit Fein  
EVP @ STKI**

# 1

# IT Strategy

Value-based Technology Strategy  
and Organizational Transformation

"If I had to use one word to describe our strategy ..."

# IT Strategy = Value = Change Mng

- We live in a world of products.
- The success of your company depends entirely on your product's quality
- Do your products provide value so that customers will choose to use them?

After an Organization defines what **VALUE** it provides to which **CUSTOMERS**, the goal of an IT Strategy is to deliver it through **Technology- powered Product**

There is a profound difference between:

Customer-centric, **Value-driven IT strategy** fully aligned with company vision & org. objectives

Tactical IT plan, more like a **grocery list** of how much HW to buy, and what licensing to handle

# I RECOMMEND

---

- **Focus on Value only.** It doesn't matter if it costs more, or takes more time and from which budget section it comes from

- Change the unwritten rule of separating a consulting company from an implementation company. Choose the **best and most experienced one**, without any limits

# WHY

---

- Cost-saving or meeting timelines don't predict success – only how good the company's products are and if your customers choose to buy or use your products

- Many times, leading **implementation companies** have the required **consulting knowledge** or leading consulting companies have leading practices for implementation

# A Word to Strategy Consultants:

**Strategy Consultancy = Change Management**

Organizations struggle with the changes required of them (cloud, automation, DevOps, org. redesign, etc.), in order to become Value-based, Product-led, and Data-driven.

These changes are Top-Down and they go way beyond the boundaries of IT.

- Start with senior management - If the leaders are not committed, don't even try

VALUE

- The only goal of strategic planning is the clear and measurable value of business technology to the company's goals
- Strategic plan as a point solution no longer has a place

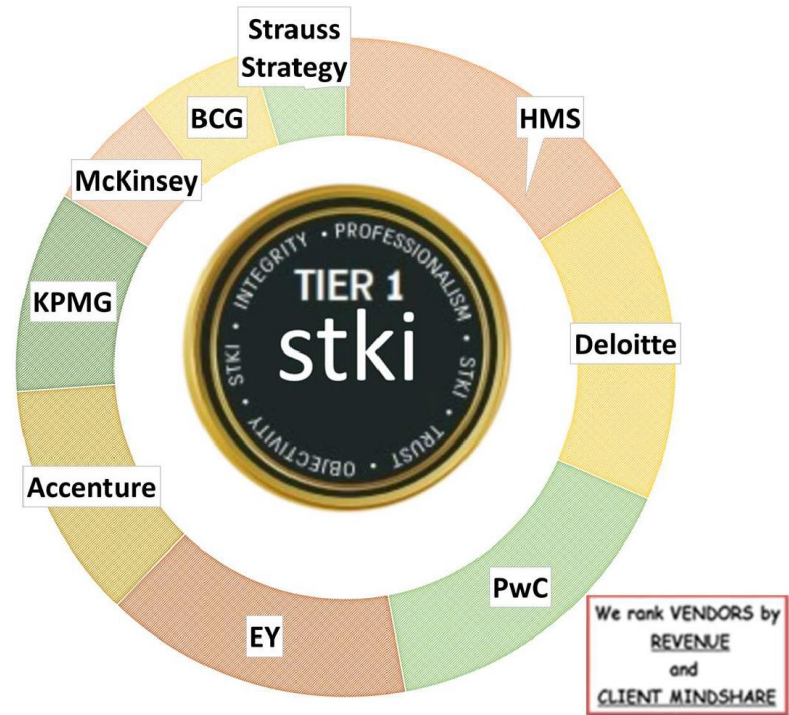

- You must deal with outdated processes, such as budget mng, annual date-based Roadmap, and a dramatic change in KPIs
- It's a change of tectonic plates, but it must be done already

# IT Strategy Consulting

We rank VENDORS by  
REVENUE  
and  
CLIENT MINDSHARE

## + Tier 3

# Organizational Transformation Consulting

## I Recommend

Make sure that your strategic plan necessarily changes the operational model and organizational structure

## Why

*“Because complex problems can only be addressed by complex structures.”*

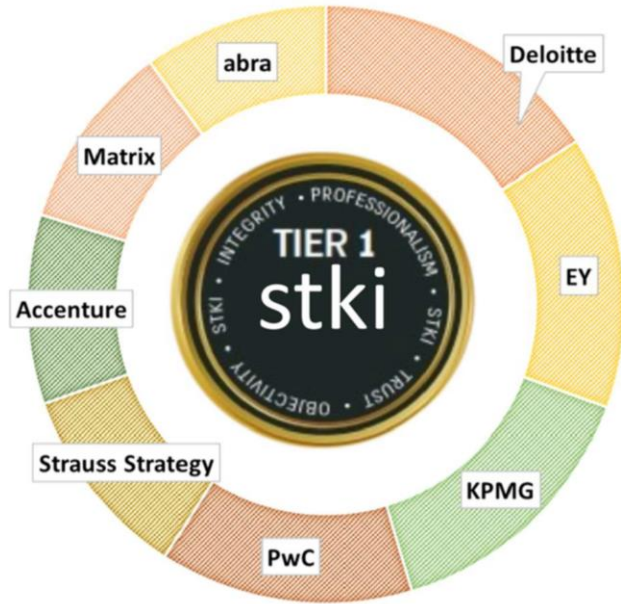

The world where there are people who only think and there are people who only do is over – it’s a unified, customer-centric, multi-disciplined effort

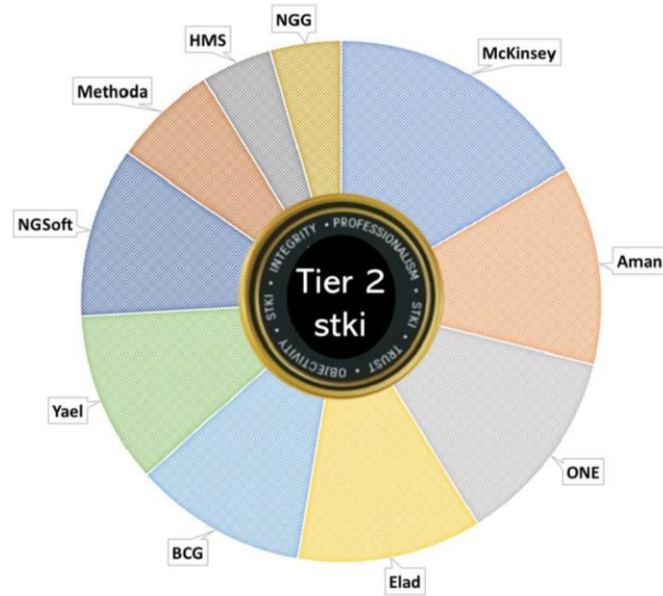

# Organizational Transformation Consulting

We rank VENDORS by  
REVENUE  
and  
CLIENT MINDSHARE

**+ Tier 3**

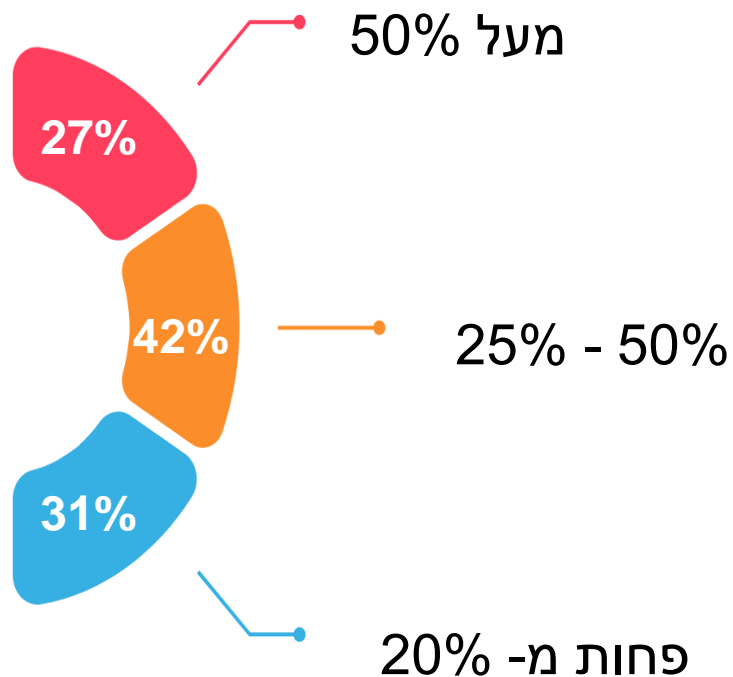

2

# From Project to Product

Tech products people love and  
PPM tools

# מהו אחוז פיתוחי הדיגיטל מתוך כלל הפיתוחים?

Today **~70%** of all dev **is digital dev.**

There is a fundamental difference between customers' applications that are developed as a **product** and those that are developed as a **project**

Source: STKI 2023

## From the Customer's Point of View

Continuous Value for me

Customer-Focused Design

Continuously improved and updated over time

## What does this mean for the organization?

Dedicated, constant, accountable product team, led by Product Mngr

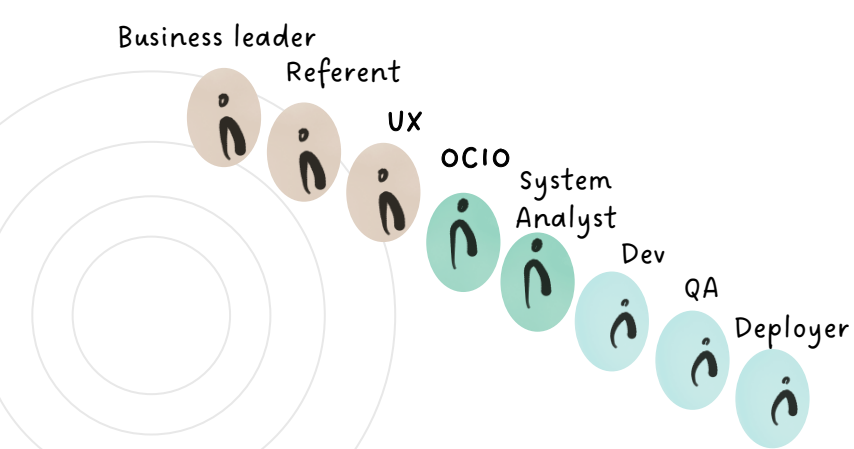

Product discovery based on 30 customers interviews by the product team

The same team is responsible for the entire Product Lifecycle, product discovery, delivery & maintenance

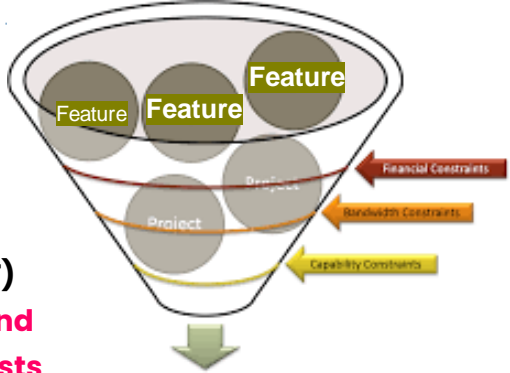

**Customers want product**

**Orgs must work differently to build products customers love**

**Project-based technology discovery**

**Feature-driven process (OUTPUT) driven by Sales and Business specialists**

**Highest ROI Feature**

**Product-based technology discovery**

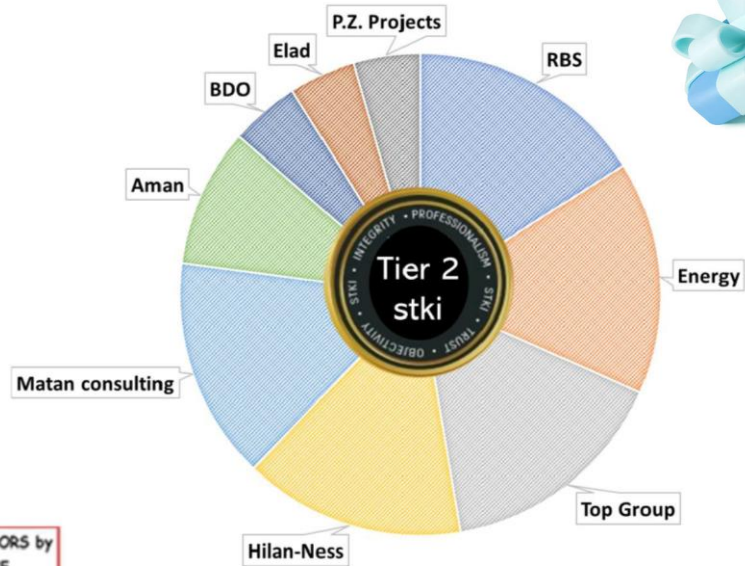

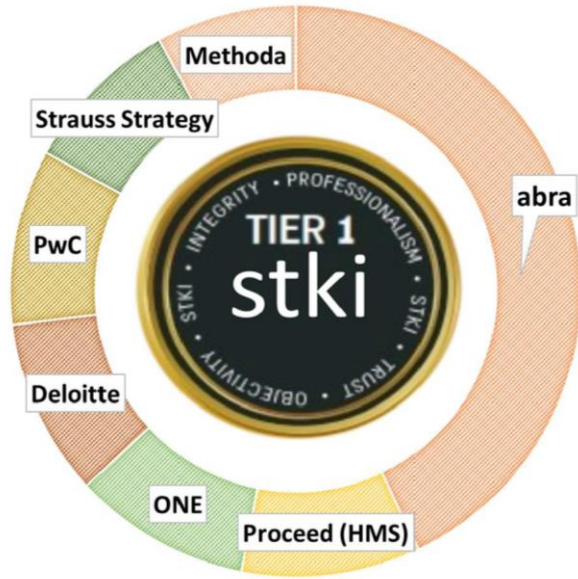

**VS**

**Outcome-driven process, based on understanding that half of our ideas are just not going to work.**

# Project Management/ OCIO Consulting

We rank VENDORS by  
REVENUE  
and  
CLIENT MINDSHARE

# Technology-organizational model for PPM

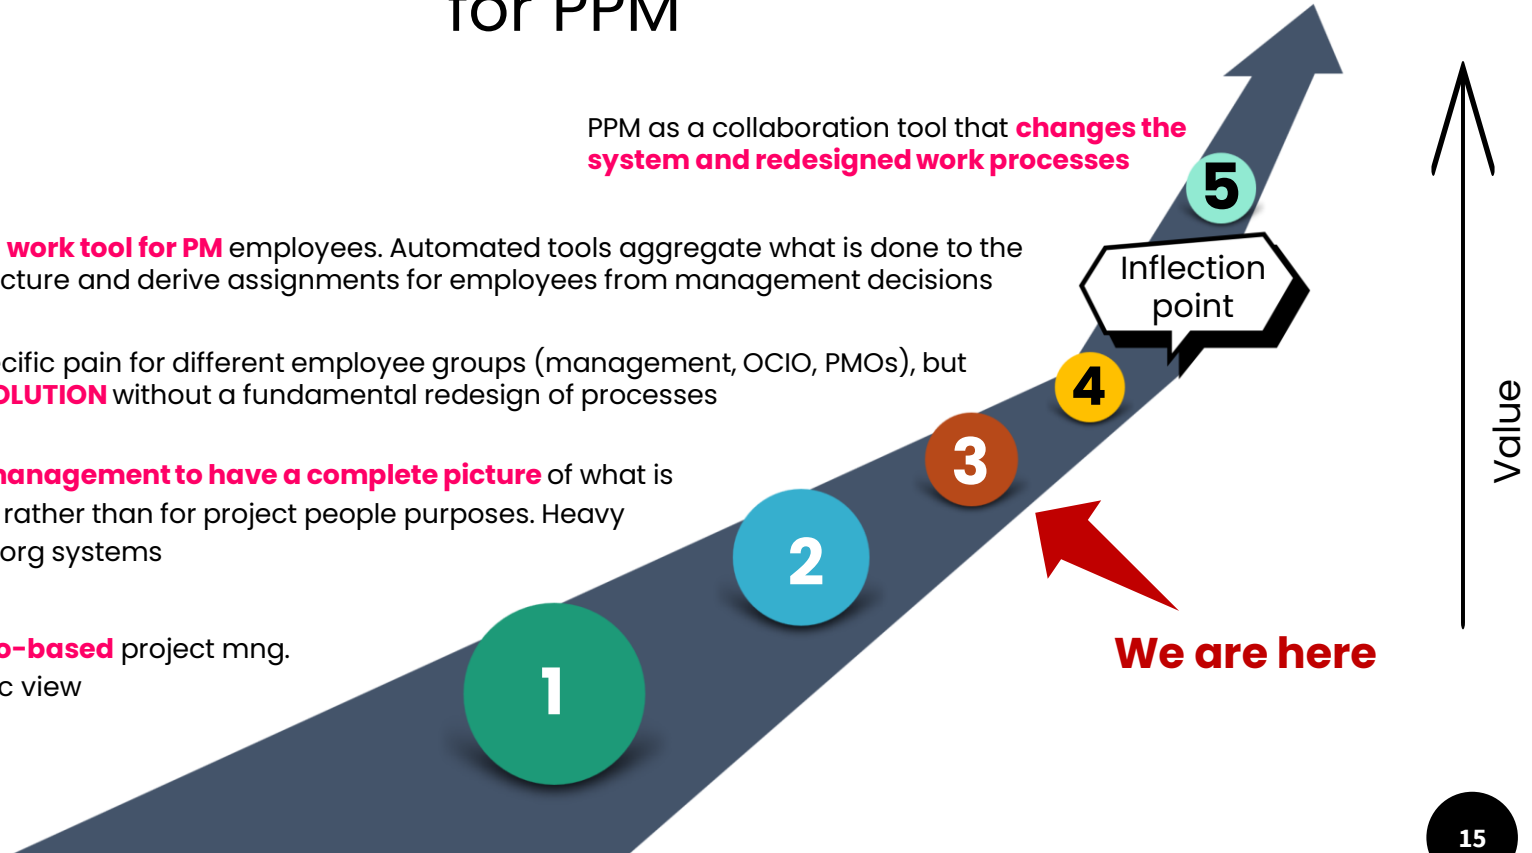

PPM as a **work tool for PM** employees. Automated tools aggregate what is done to the bigger picture and derive assignments for employees from management decisions

PPM tools solve a specific pain for different employee groups (management, OCIO, PMOs), but remain as a **POINT SOLUTION** without a fundamental redesign of processes

PPM - Mostly for the **management to have a complete picture** of what is happening in the org, rather than for project people purposes. Heavy integration into other org systems

Disjointed, **silo-based** project mng.  
Lack of holistic view

PPM as a collaboration tool that **changes the system and redesigned work processes**

# Product Management

Disconnected with the org strategy, feature-based PM

Value-streaming multi-disciplined IT Product team

Blurring the business/ IT boundaries, unified work on a specific Product

Customer-centric Product team product discovery and delivery

PM that necessarily changes the **Organization, processes, and structure**

new technology demonstrates its capabilities

We're in BETWEEN TIMES

What would an enterprise look like if designed from scratch, given knowledge about the new technology?

**Proving new uses for electricity:**  
Edison focused on light (used at night) ; Sprague focused on electric motors for factories, streetcars and building elevators.(daytime electric power )

Entrepreneurs took steam, horses and other power supplies swapping it for new "plug and play"  
**POINT SOLUTIONS**  
(that did not offer a reason to use more power)

**Application Solutions**  
started when electric drives were mounted on single machines (had to be totally redesigned in order to take advantage of its own engine)

The value of electricity was recognized when the possibility of 'buying' power only when needed and only in the amount needed was understood.  
This insight required a **complete "system" reorganization, work processes and space redesign ,**

1879, Edison demonstrated the electric light bulb

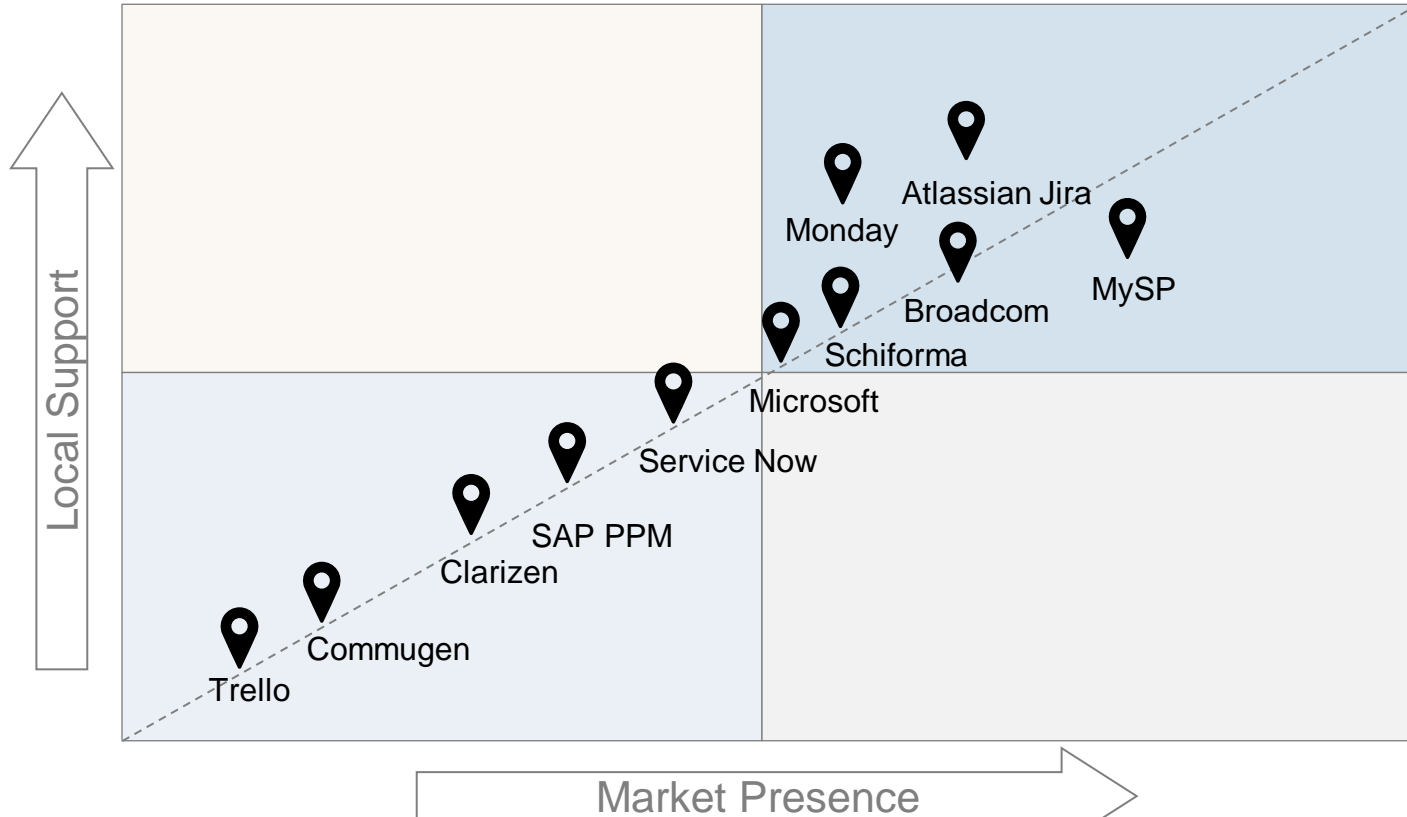

# באילו מוצרים עובד ארגונך כיום לטובת ניהול מוצר?

Source: STKI 2023

# PPM Israeli Market Positioning– 2023

There is NO clear PPM winner

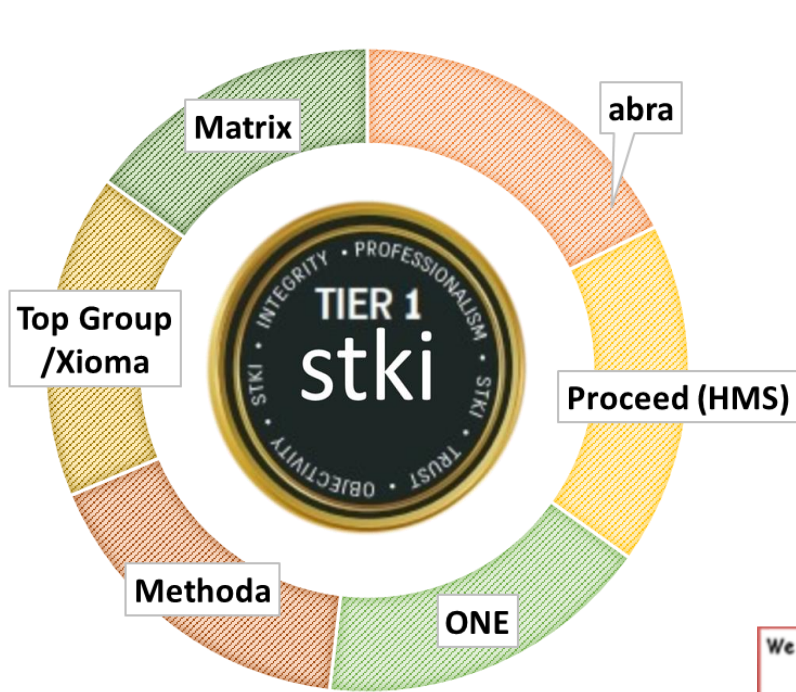

# A word to Vendors that deliver PPM:

- Many orgs are not very happy with their current PPM installation. They are looking for a user-friendly, cloud-native, flexible, easy-to-deploy tool, that can manage every aspect of PM in an enterprise (budget, hours, tasks, risk, etc), but unfortunately, such a perfect solution doesn't exist - all have **Pros & Cons**
- PPM can be much more successful if everyone's **expectations** are managed correctly
- We believe that vendors should **separate between PPM consulting and tool implementation** and become tool agnostic

# PPM & Project Management Implementation

We rank VENDORS by  
REVENUE  
and  
CLIENT MINDSHARE

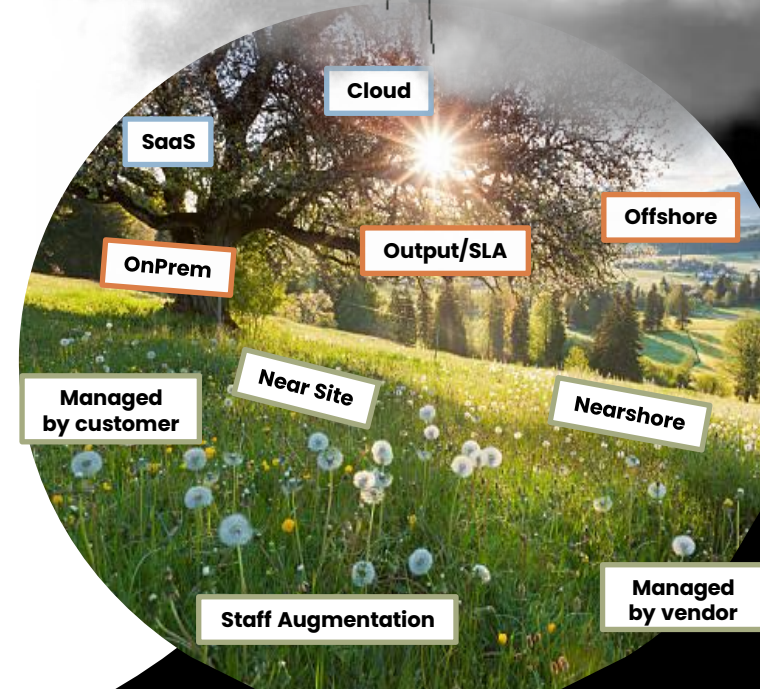

**+ Tier 3**

# 3

# Outsourcing

Sourcing models, managed services, from traditional outsourcing to cloud, Nearshore, Offshore, and in-between

# Outsourcing

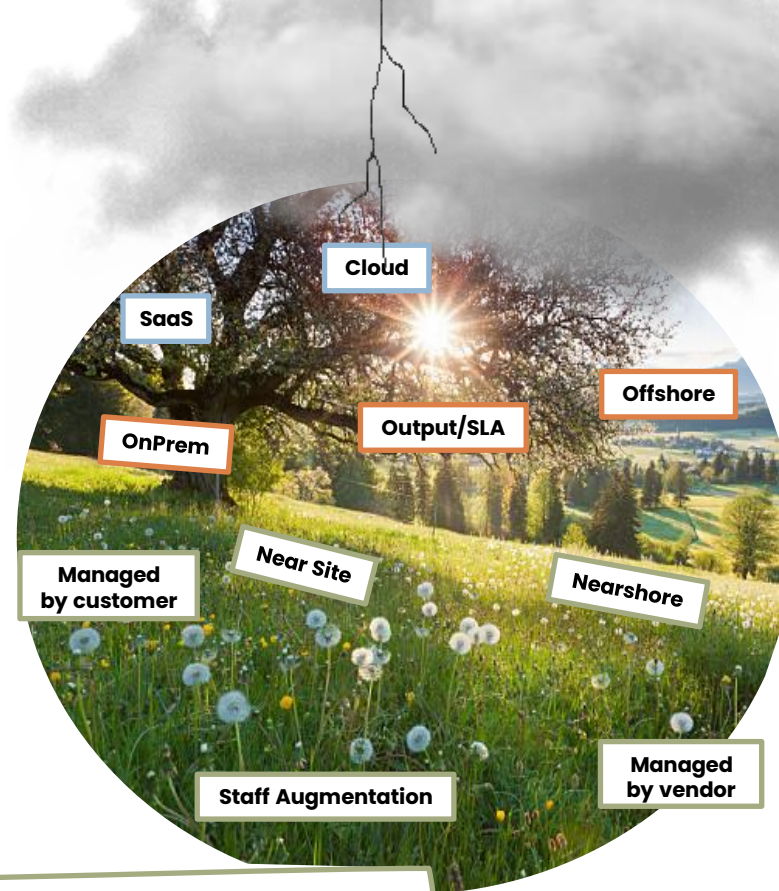

## Theory of competitive advantage

*"...nations fare better when they focus on producing goods with the lowest production opportunity costs."*

# Outsourcing Trends

- IT services market is robust
- Outsourcing continues to grow
- Traditional complete outsourcing taking a back seat
- Instead, aspects of the sourcing process that directly contribute to value creation for the enterprise client now have priority
- The “old, on-Prem IT” is moving to the cloud
- We’re seeing framework conditions, objectives, and rules in the relationship between Enterprises & Sourcing providers change at an astounding pace.

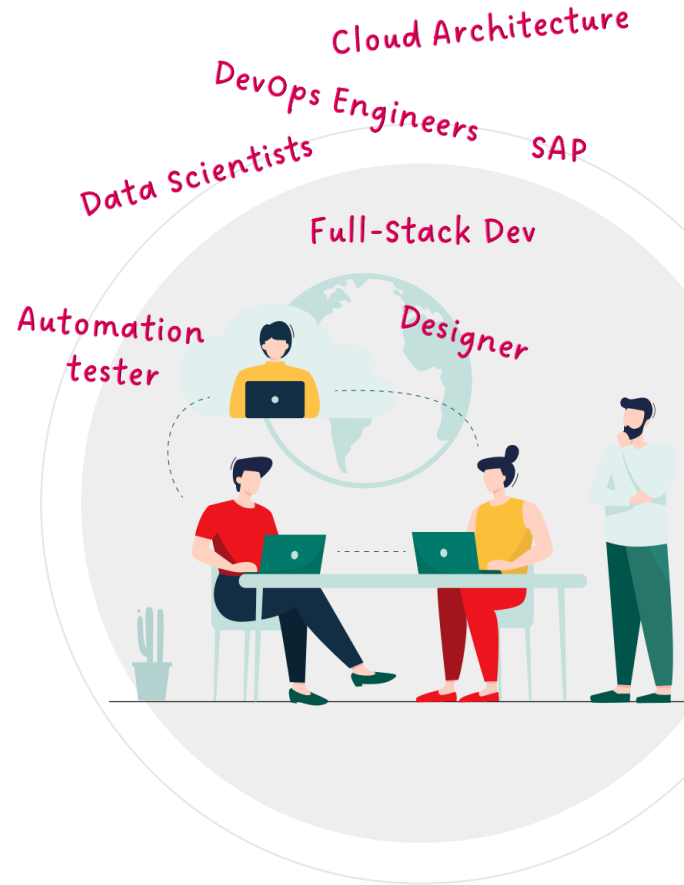

One complete outsourcing =  $\Sigma$  of many managed services

# Nearshore, Offshore, and in-between

- Rapid tech development has **increased the demand** for qualified IT specialists
  - Closing **the talent gap** remains a challenge
  - **Nearshore & Offshore** models offer solutions for orgs lacking in-house specialists
  - Israel already has a **successful track record** with these models
- **Benefits** of Nearshore and Offshore:
  - **Access** to experienced professionals from a pool of skilled specialists with little turnover and practice set up **within days** or weeks

# Testing Trends

## SW development increase

- We are in the era where customers want to **experience more features** from the software they use
- Orgs **strive** to deliver high-quality SW in ever-shorter timelines

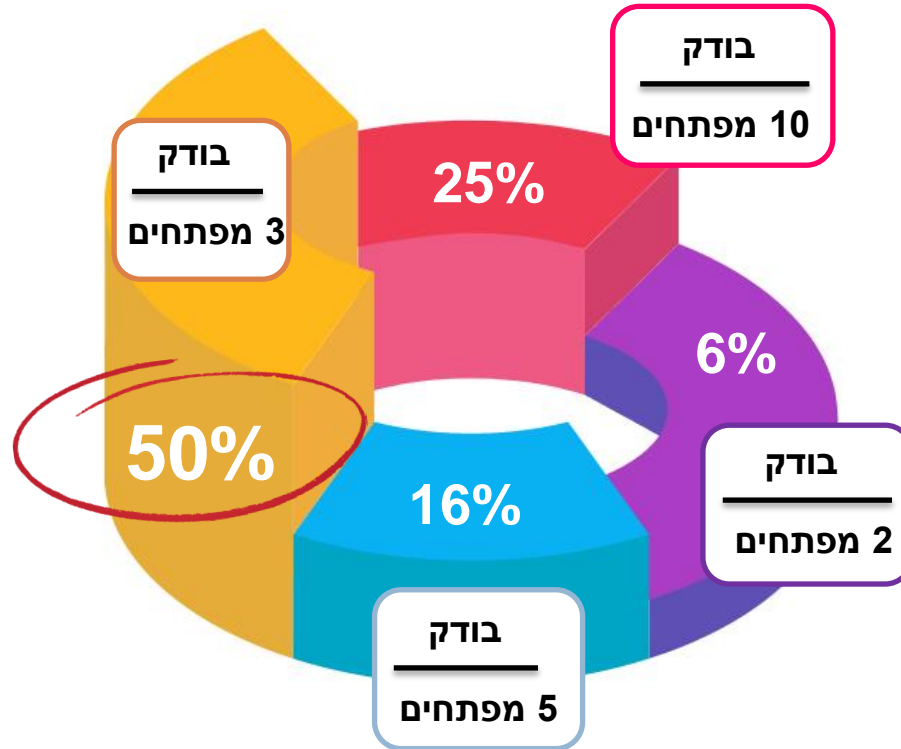

## QA Market Explosion

The importance of **Testing increased** in the pursuit of SW accuracy and efficiency

# מהו היחס של בודק : מפתח בארגון?

Dev/QA ratio  
is changing  
from 1:10 in 2019  
to 1:3 in 2023

**Source: STKI Survey 2023**

Copyright@STKI\_2023 Do not remove source or attribution from any slide, graph or portion of graph

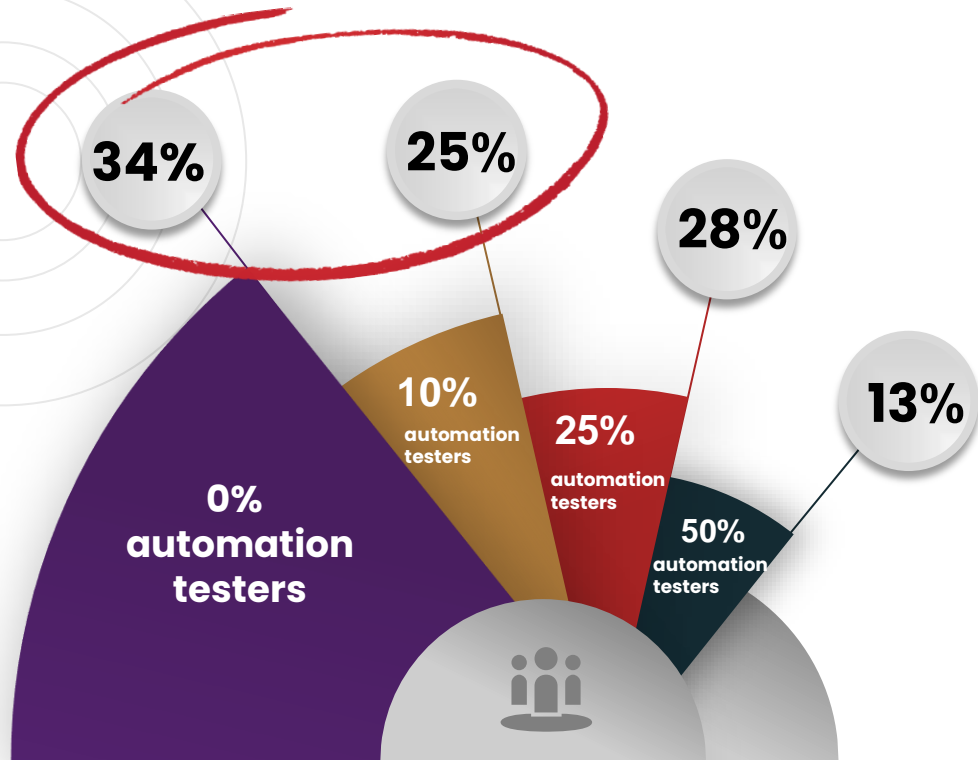

# QA talent gaps may get even worse

To fill in the workforce gap and for better and faster coverage, organizations turned to test automation

BUT...

# אחוז בודקים ידניים לעומת בודקי אוטומציה בארגוןך

For **59%** of the orgs, automation testers make up less than **10%** of the org's total testers

Source: STKI Survey 2023

# האתגרים הגדולים ביותר בהקמה של בדיקות

## אוטומטיות בארגון:

The main challenge is in the establishment

Source: STKI Survey 2023

# I RECOMMEND

---

- **In parallel with a manual QA start building Testing Automation CoE** with developers and automation people: automation infrastructure establishment, standards and methodologies
- Invest in **Low Code tools**
- Start your journey to Testing Automation CoE establishment with **expert consulting**

# WHY

---

- The profile of manual and automation testers is different. Automation tester is a developer. **Most manual testers don't have the qualification to become developers**
- LCDP **don't** require a strong background in development
- **Testing Automation requires knowledge & skills that orgs don't have** – leading vendors offer a quick free assessment, mentoring for QA mngr

# 4

# Business Process Automation

RPA, Process optimization,  
and Process Mining

# Technology-organizational model

## for Business Automation

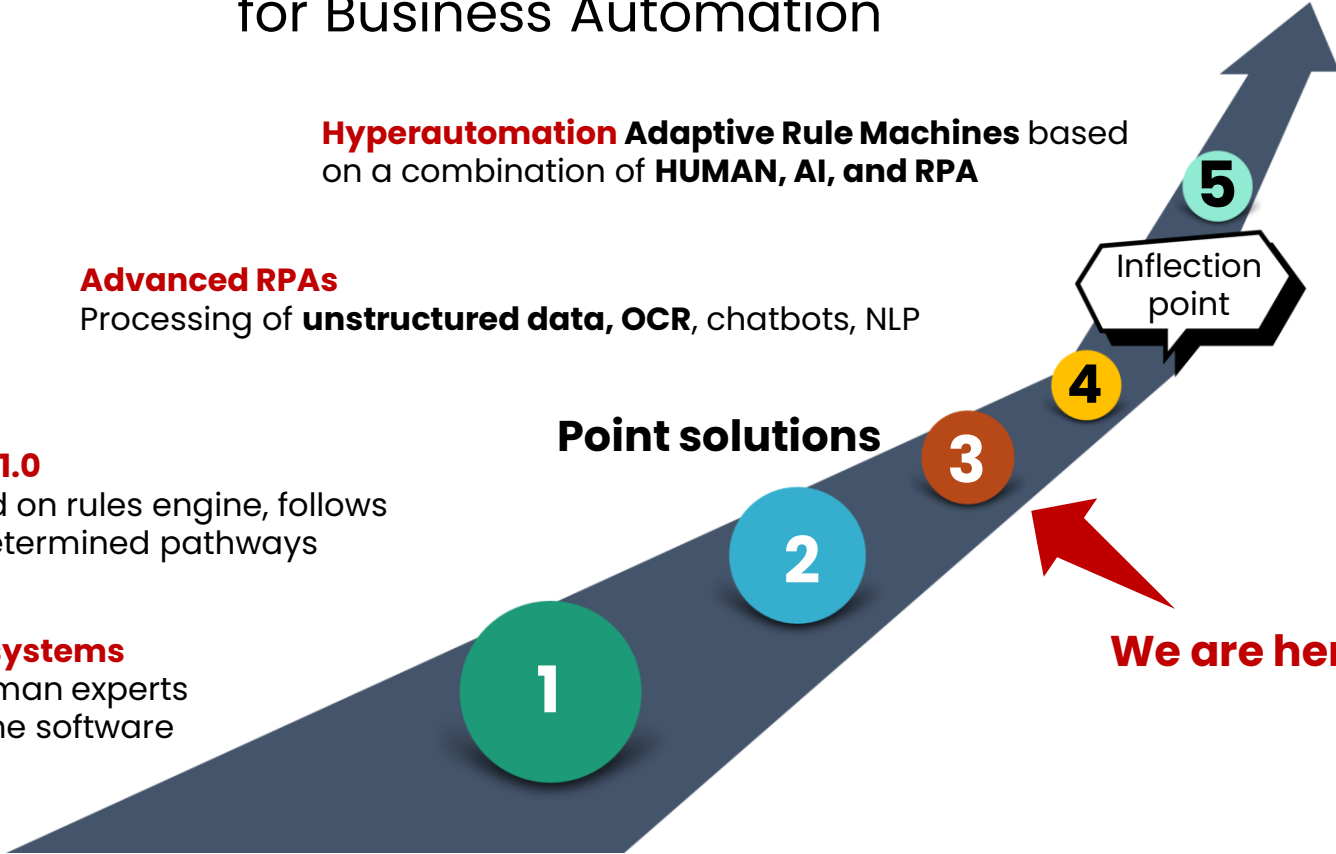

**Hyperautomation** Adaptive Rule Machines based on a combination of **HUMAN, AI, and RPA**

**Advanced RPAs**  
Processing of **unstructured data, OCR, chatbots, NLP**

**RPA v1.0**  
Based on rules engine, follows predetermined pathways

**Rules-based systems**  
Defined by human experts while writing the software

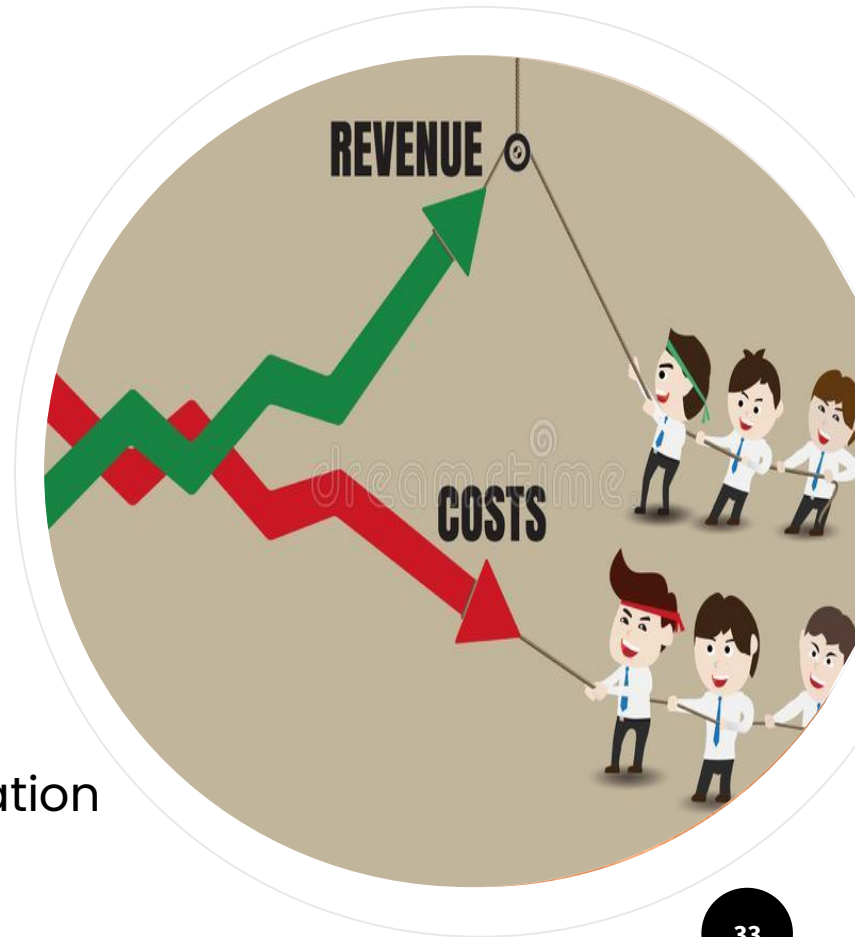

# Every business today

Tries to **increase revenues** while **decreasing costs**

Efficient transactional processing lowers operational costs and risk through automation

# Process Automation & Optimization

- A new tech - RPA - entered the Israeli market by storm
- More than 100 enterprises have already implemented RPAs and continued to expand their applications this year
- Unfortunately, most orgs have implemented RPA as a quick win to a specific problem

**One of the RPA benefits was revealing how many errors and delays were caused by bad processes**

At the start simply implementing RPA put you a step ahead of the competition.

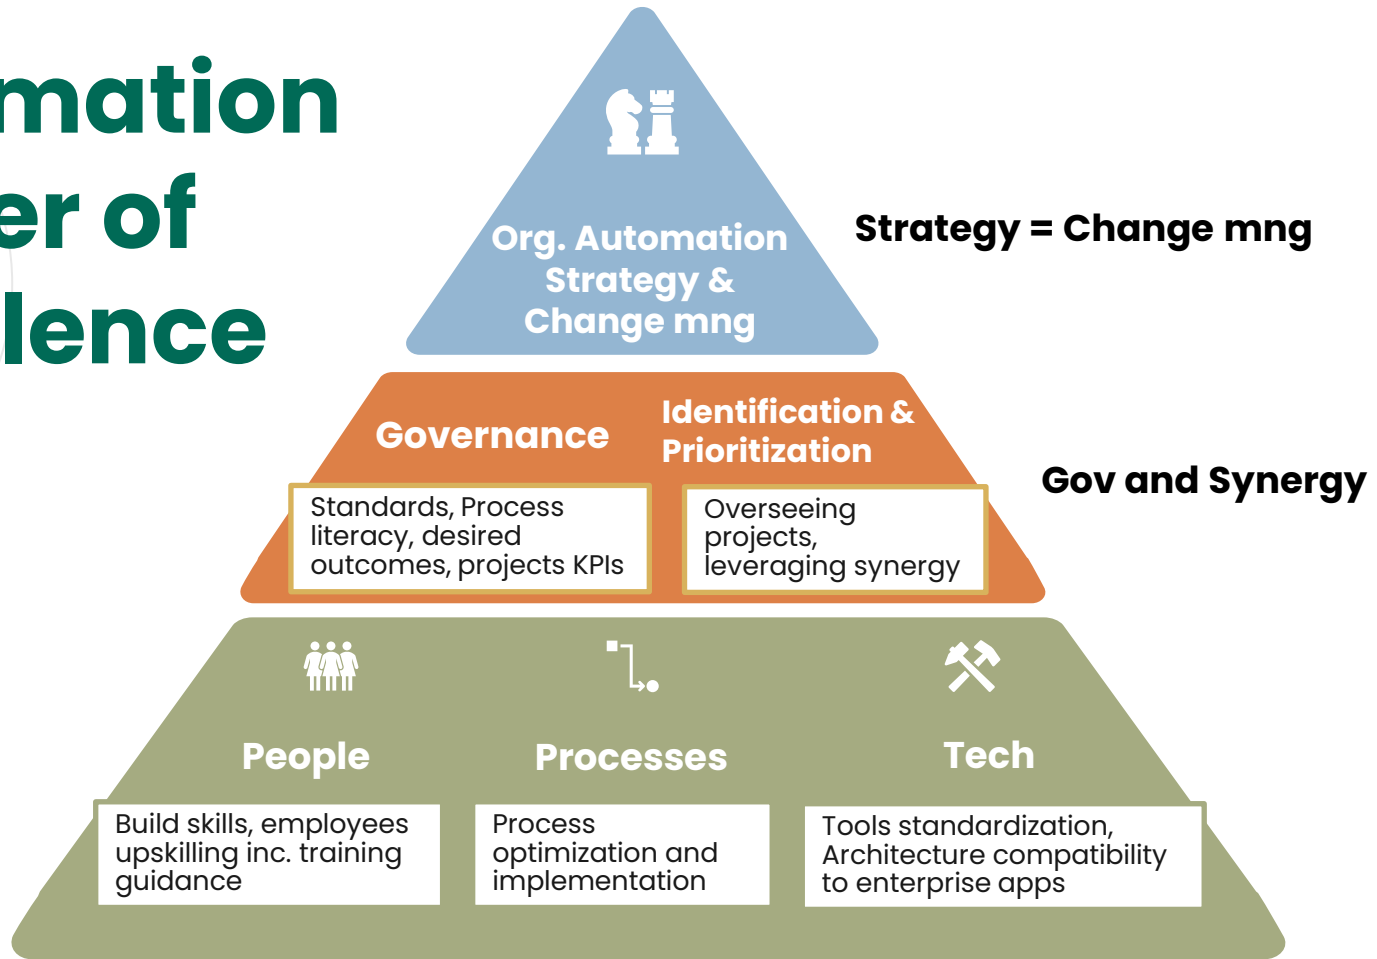

Now, the Competitive edge hinges not on whether you automate, but how you do it.

## Automation CoE

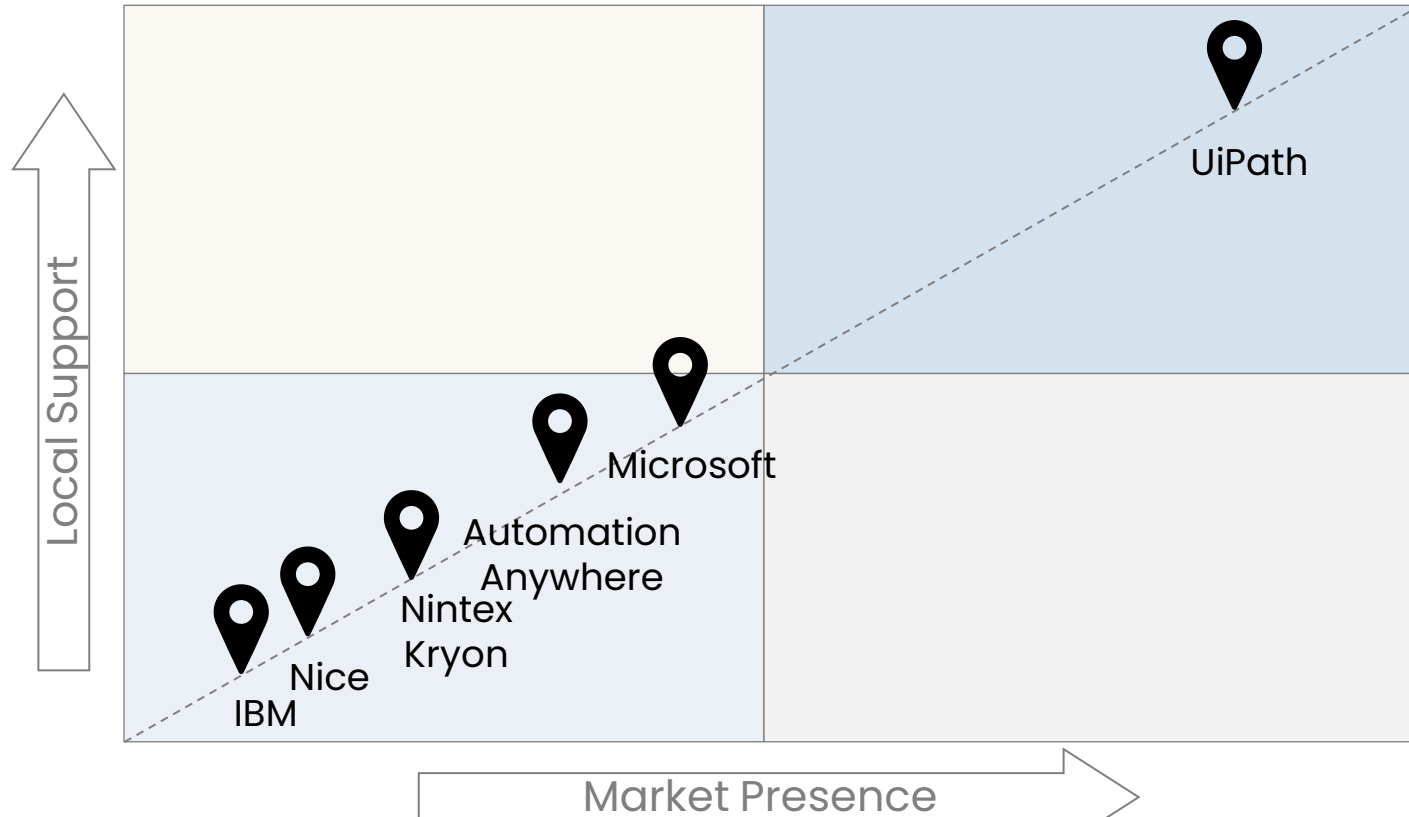

**early days of RPA**

# Automation Center of Excellence

# RPA- Israeli Market Positioning-2023

# Automation Tools (RPA, OCR, others) Consulting & Implementations

We rank VENDORS by  
**REVENUE**  
and  
**CLIENT MINDSHARE**

# Business processes are the pillars of the organization

But in an age of **ERP standardization processes** people GOT USED to vanilla processes which led to the **loss of Process Analyst Skills, Departments,** and business processes' understanding

## BPM didn't help

- Rule Machines or Custom Rule-based Systems were **defined by human experts while writing the software**
- With years people **forgot** the rules
- It remained **static**

***“We should work on our process, not the outcome of our processes”- W. Edwards Deming, Statistician.***

## AI/ML changing the picture

- AI/ ML **Rule Engine** can **learn from past knowledge** and adjust itself to changes

# But what is our process?

Usually, 2 completely different pictures

What we think

IDEAL  
PROCESS

How it's actually done

REALITY

# Process Mining

Combination of process mining (Data obtained from event logs & transactional DBs) and real-time analytics capabilities

One can detect process deviations, and bottlenecks and also generate inferences for recommendations and prediction

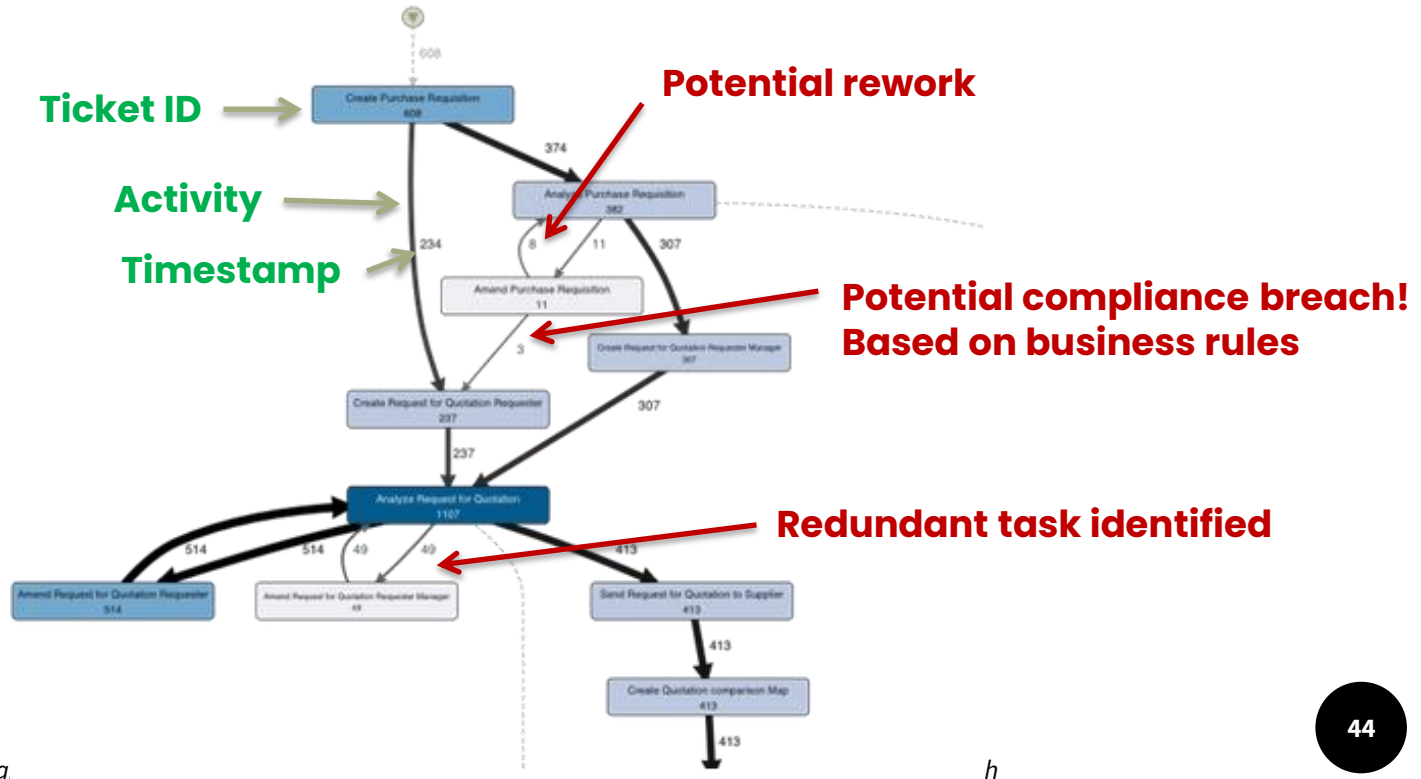

# Digital traces in IT systems

- IT systems process data
- Information about previous events and activities are gathered in (event) logs - these are the digital traces
- We usually only use this data to analyze errors or track activities
- That's quite a lot of data that is rarely used!
- Most companies have mountains of unused data they could **mine for insights**.

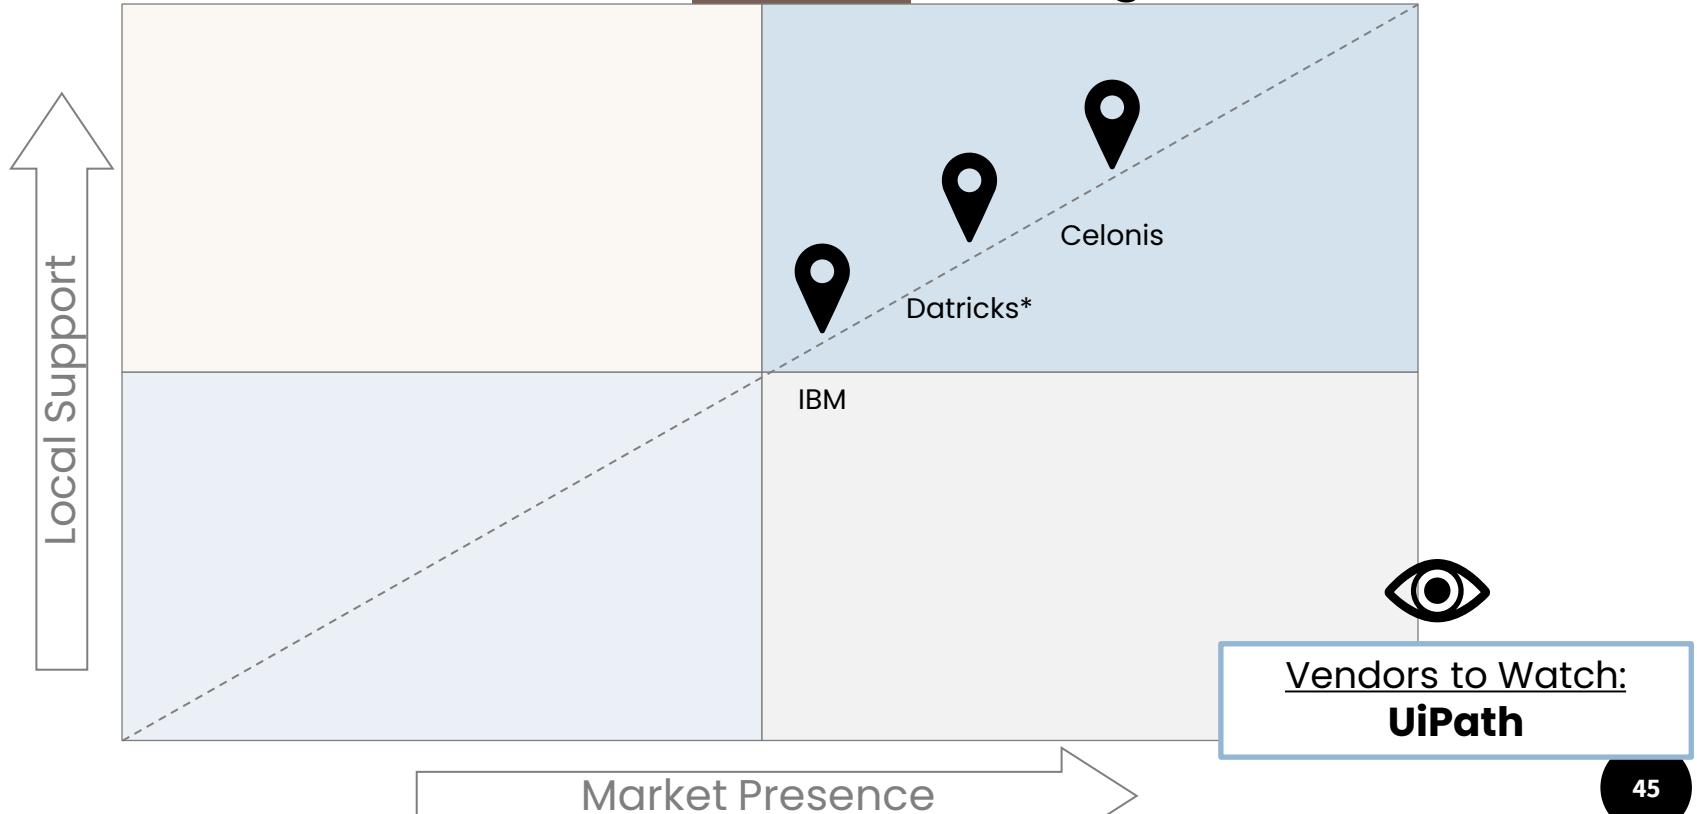

# You need to understand the process before you can optimize it

# Process Mining 2023

## Israeli Market Positioning

# Process Mining Tools & Integrators in Israel 2023

 Global leader

	Clients	SaaS/ On-Premise	Integrators
 <b>Celonis</b>	ICL	SaaS/On-Premise (partial features)	ERGO
<b>IBM</b>	ELAL	SaaS/On-Premise	IBM Expert Labs, ABP, Malam, Matrix
 <b>Software AG</b>	–	SaaS	Software AG
<b>Datricks*</b> (Risk Mining)	Netafim, Teva, Keter, Phoenix, ICL	SaaS/On-Premise	Datricks, SAP
<b>Pegasystems</b>		SaaS	Elad
<b>UIPath</b>	–	SaaS/On-Premise	HMS
<b>SAP Signavio</b>			SAP, SAP integrators
<b>Microsoft</b>	–	SaaS	
<b>ABBYY</b>	–		Software Sources

# I RECOMMEND

---

# WHY

---

- Start by discovering & revealing the truth of the actual process
  - Start the org automation journey with the Industrial Engineering consulting
  - Do the automation with Process Discovery
- Most orgs **can't tell what their actual processes** are. Process understanding is based on shadowing & standard interview-style discussions with users. Most of them provide an ideal answer, not what they actually do
  - In the era of ERP, most enterprises have lost their Process Analyst Skills. Most vendors prefer to start implementation, instead of process optimization
  - Process discovery takes the blindfolds off IT & mngt to see how their processes are actually working

# Thank you!
