Forrester's CEO
George Colony:
Vendors of the future

Left brain

I am the left brain.
I am a scientist. A realist.
I love the familiar. I control.
Analytical. Systematic.
Always in control.
Realistic. I calculate.

This is the story

Right brain

I am the right brain.
I am a dreamer. I am a poet.
I love the unfamiliar. I am a risk taker.
I love the sound of roaring laughter.
I love the feel of a thousand love letters.
I love the feel of a thousand love letters.
I love the feel of a thousand love letters.

IT Services have new clients:

1970-2012:

*verbal; sequential and
logical structured thinking; analyzing
and controlling processes;
logical beings*

IT Clients:

- *Finance*
- *Logistics*
- *HR*
- *Transactional core*

2012- :

Unstructured approach to tasks;
multitasking ; visual
emotional responses;
social beings

IT Clients:

- *Sales*
- *Marketing*
- *Consumer*

IT Services have new clients:

1970-2012:

verbal; sequential and
logical structured thinking; analyzing
and controlling processes;
logical beings

IT Clients:

- Finance
- Logistics
- HR
- **SCIENCE is concerned with**
factual knowledge (what-is)
rational core

2012- :

Unstructured approach to tasks;
multitasking ; visual
emotional responses;
social beings

IT Clients:

DESIGN is concerned with
instrumental knowledge
(how ~~what is relates~~ to
what-ought-to-be),
how actions can meet goals

What is the closest profession to “new” IT ?

Design Thinking: designing experiences

ARCHITECTS look at *actions and places* and then *design future experiences*

DESIGN THINKING : WICKED $\eta\psi\epsilon$ problems

Defining a problem defines a solution

To tame a *wicked problem*, we have to agree on goals and actions

This requires knowledge about actions, not just facts

Only through understanding experiences can we design for people.

Prof. Horst Rittel

"We make our buildings and thereafter they make us."
Winston Churchill

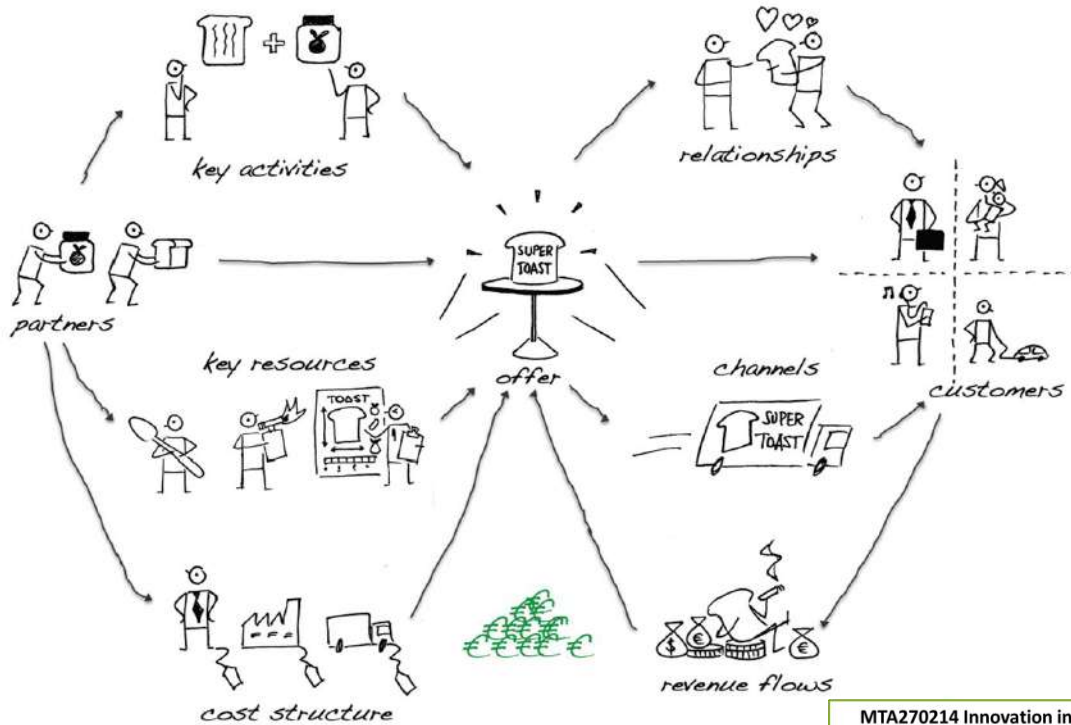

Solving simple problems may lead to improvement—but not innovation.
For *innovation*, we need to re-frame wicked problems.

Business Architects create Business Models

"A business without a design is one that is likely to be overly complex, expensive, inefficient and unaligned."

MTA270214 Innovation in IT
Teacher: Dr. Jimmy Schwarzkopf

David Baker

partner and the chief architect
PwC's Diamond Advisory Services

Business Architects create Business Models

- ❖ **BUSINESS MODEL** “designs” how an enterprise will create and deliver value:
 - ❖ Decide where it operates
 - ❖ Decide how it competes
 - ❖ Decide how it mobilizes the organization
- ❖ **IT MODEL** “designs” how IT will enable the organization to operate in order to:
 - ❖ Deliver the business model
 - ❖ Optimize its customer offering, business capabilities and corporate structure to create, deliver and capture value.

"A business without a design is one that is likely to be overly complex, expensive, inefficient and unaligned."

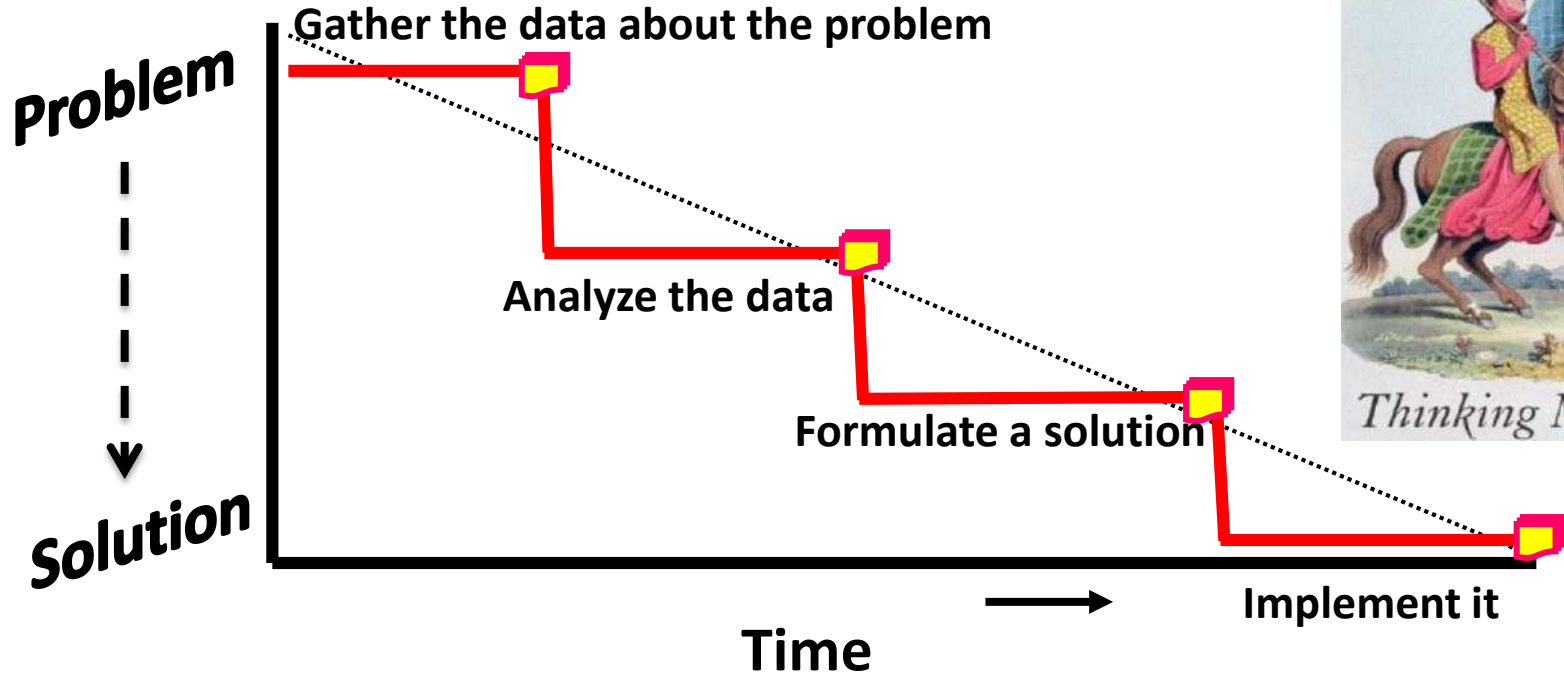

David Baker

partner and the chief architect
PwC's Diamond Advisory Services

Work was planned as a linear process...

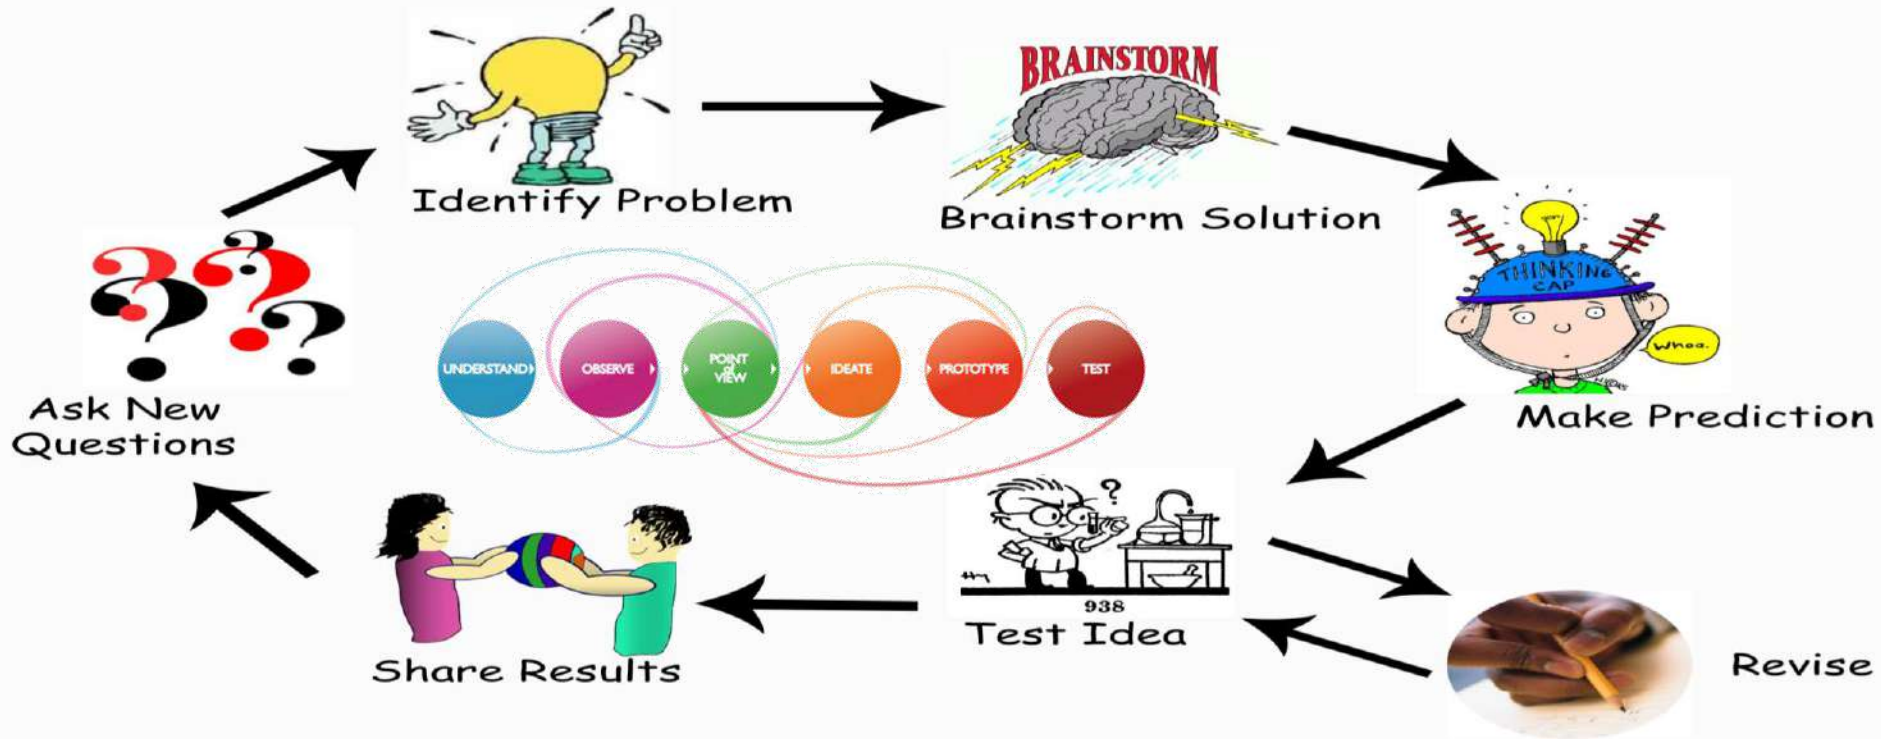

Today :“DESIGN THINKING” for Problem Solution

Every Proposed Solution ...

Today :“DESIGN THINKING” for Problem Solution

“Some problems are so **complex** that you have to be highly intelligent and well informed **just to be undecided** about them”

Prof. Laurence J. Peter
Author of “PETER PRINCIPLE”

GLOBALIZATION: who re-invents himself now ?

❖ Globalization 1.0

- ❖ In the 18th-19th century countries reinvented themselves

❖ Globalization 2.0

- ❖ In the 20th century, businesses reinvented themselves

❖ Globalization 3.0

- ❖ In the 21st century it is the individuals who will reinvent themselves

Karl Marx

Collectivism

man must be connected to a collective and collective thought for the sake of 'the common good'

Ayn Rand

Individualism

The pursuit of his own rational self-interest and of his own happiness is the highest moral purpose of his life.

Leading the change: ME (ultimate consumer)

- ❖ This **shift** has profound **implications**:
 - ❖ how **customers** will interact with the **marketplace** at large?
 - ❖ how **customers** will interact with **specific organizations**?
 - ❖ how **employees** will ***deliver goods and services***?
 - ❖ how **IT** will **support both** of these groups?

Progression of toward the “ME” Economy

- ❖ In 1971, Prof. Toffler criticized:
 - ❖ how **economists** had great **difficulty** imagining **alternatives** to *communism and capitalism*
 - ❖ how they could **only** envision the economy in the terms of scarcity of resources.
- ❖ He talked about a “experiential industry”
 - ❖ people in the “future”, would be willing to allocate high percentages of their salaries to live amazing experiences.
- ❖ Today we know people act irrationally

Prof. Alvin Toffler

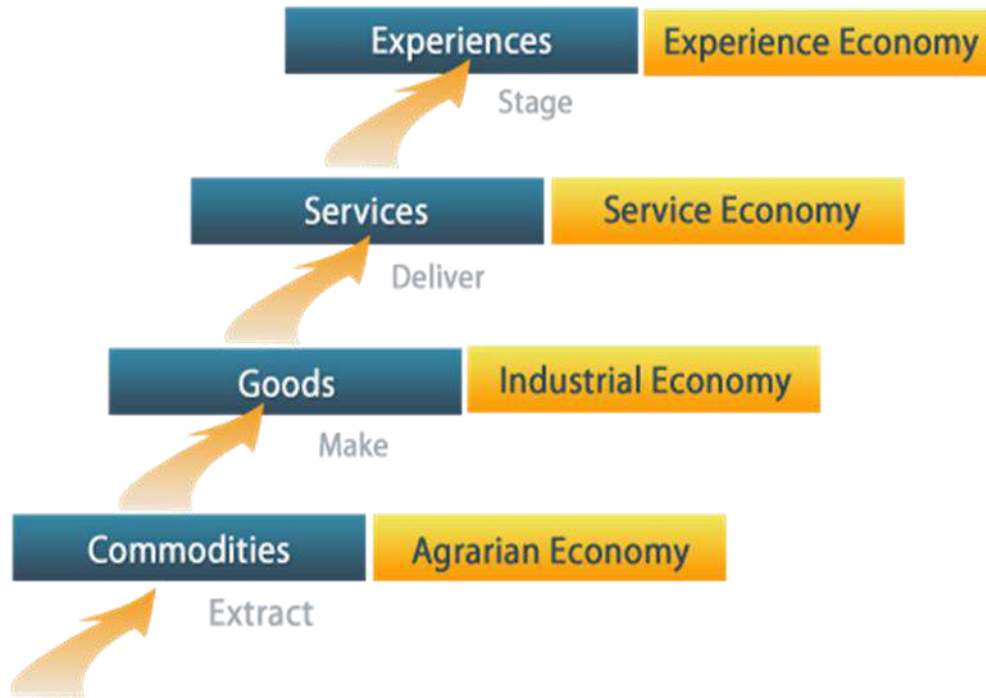

40 years ago

today

Experience (ME) Economy

WELCOME TO THE EXPERIENCE ECONOMY

BY B. JOSEPH PINE II AND
JAMES H. GILMORE

Jim Gilmore

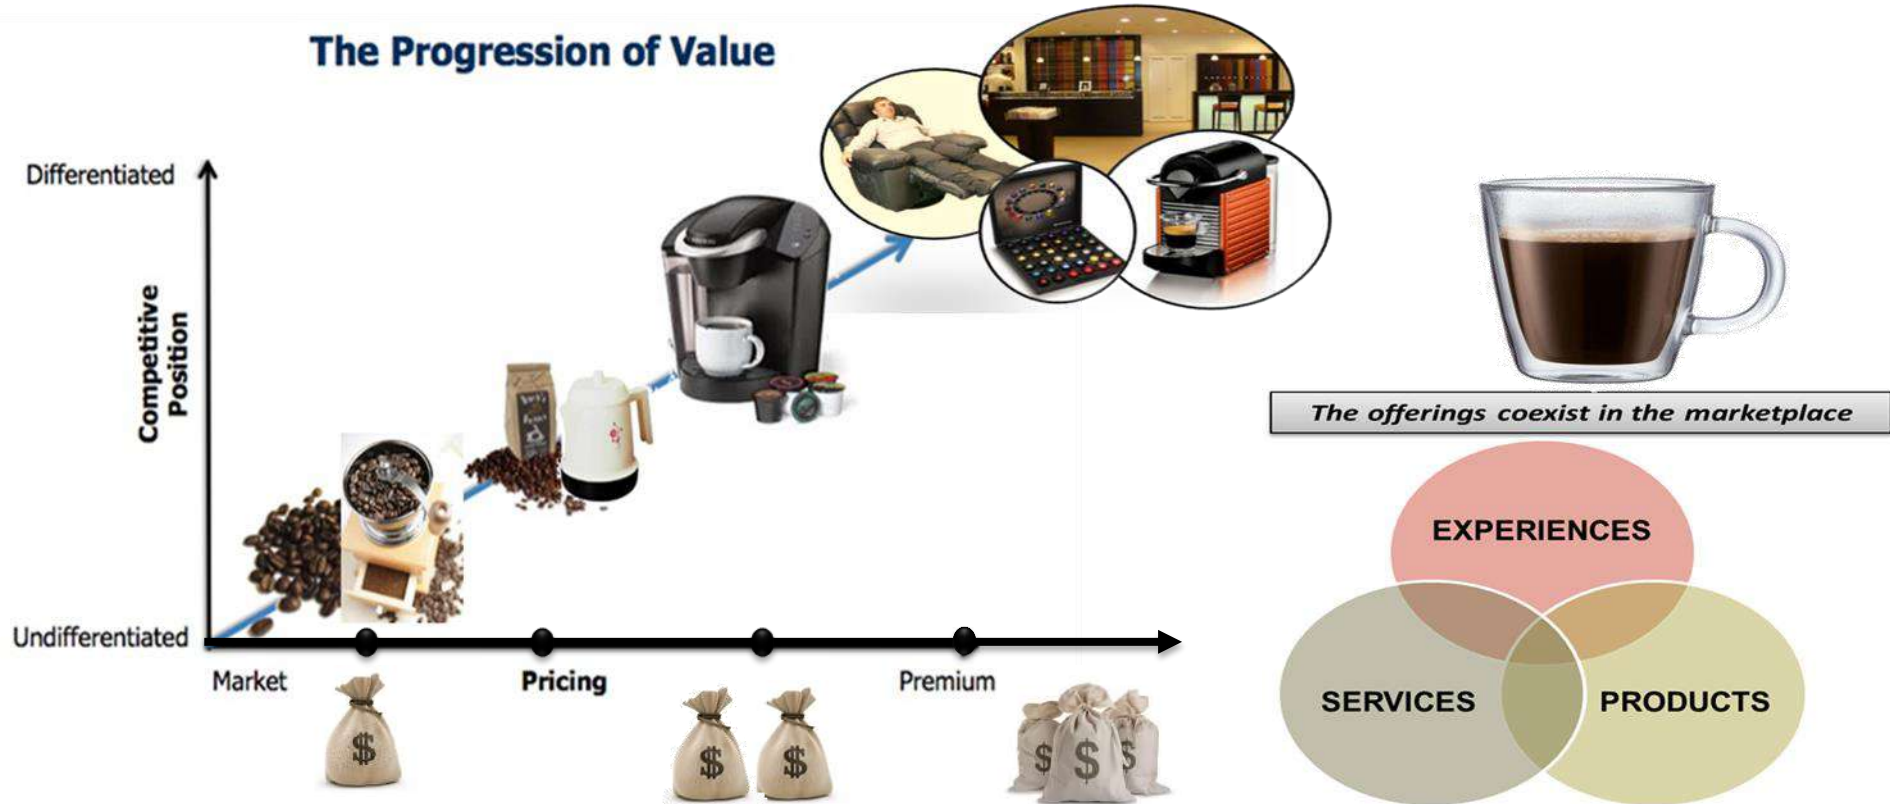

Joe Pine

Coffee as an “EXPERIENCE” Marketplace

The Progression of Value

Now we are transitioning to a Social-Experience “ME” Economy

Making a cake from **COMMODITIES** (inexpensive ingredients)

Buying a **PRODUCT** (pre-mixed ingredients in a box) in order to make a cake

Buying a Finished Cake (order a cake from a bakery or grocery store)

Outsourcing the birthday party experience

In the Social Economy:
People carry their friends in their pockets and are always sharing their experiences with them.

The experience is complete only after it is **VIRAL**

Now we are transitioning to a Social-Experience “ME” Economy

Making a cake

COMMODITY

expensive ingredients)

@errolmorris
errolmorris

If you can't click on it, how will you know what to do next?

errolmorris

If you can't click on it, it doesn't exist.

21 Jan via web ☆ Favorite ↻ Retweet ↩ Reply

Buying a Finished Cake
(at a bakery or grocery store)

Outsourcing the birthday
party experience

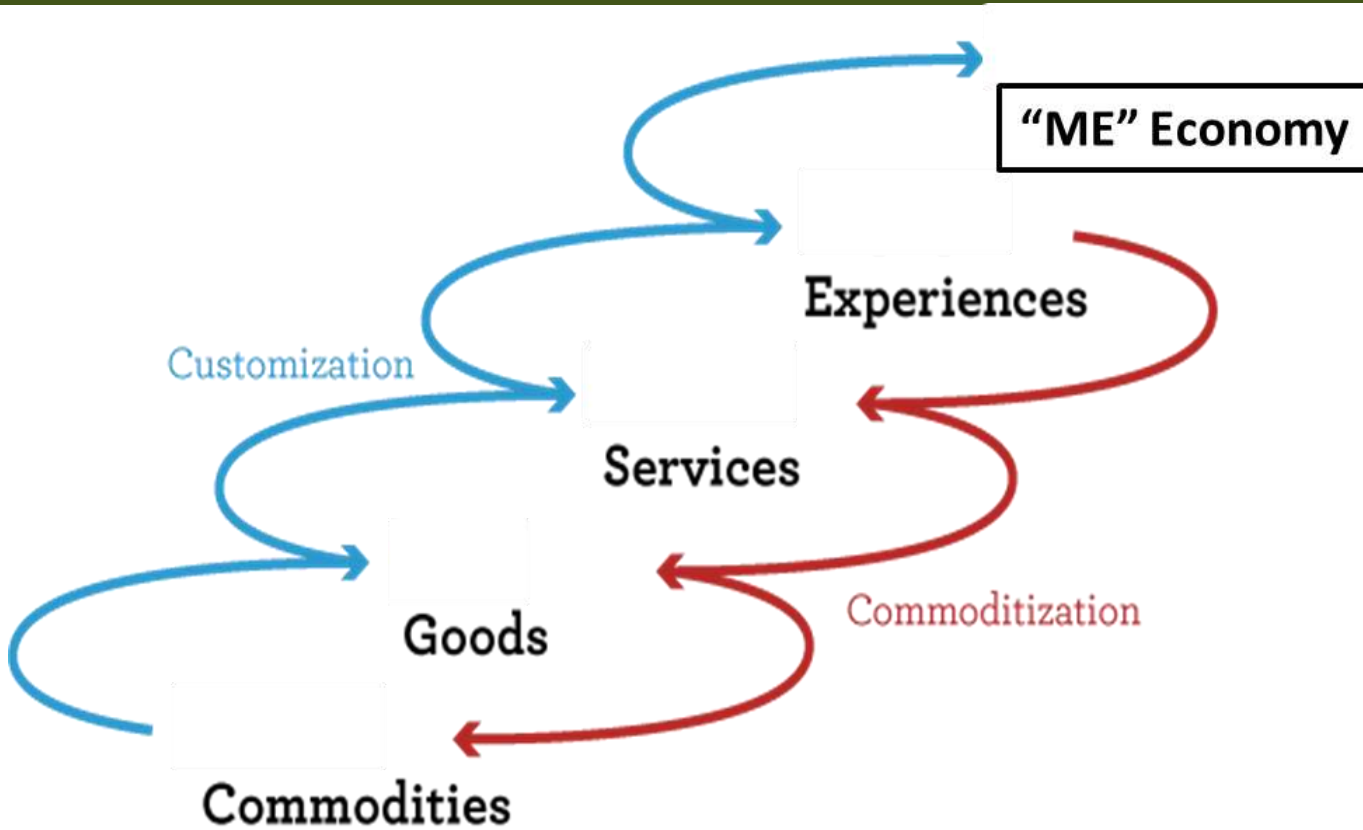

In the Social Economy:
People carry their friends in their pockets and are
always sharing their experiences with them.

The experience
is complete
only after it is **VIRAL**

New "ME" Economy

PC (ME): from personal computer to pervasive computing

❖ Pervasive computing :

- ❖ means access to
 - ❖ everything, all the time, from any device, from anywhere
- ❖ BYODevice and BYOApplication
 - ❖ One size doesn't fit all
 - ❖ One OS does not fit all
- ❖ *Security nightmare*

❖ Home PC died while the Enterprise PC is fighting for survival

- ❖ Consumerization of IT (CoIT) : **BYOEverything**
- ❖ **WEBSITES vs Apps** : which, when, with what
 - ❖ Websites are the AM radio while Apps are stereo streamed music
- ❖ The rise of the inhouse UX expertise as a must

PC (ME): from personal computer to personal cloud

- ❖ Center of “ME” computing and communicating needs
 - ❖ same thing?
- ❖ Sync between all devices (usually *more than one*)
- ❖ Self-service “Apps” store (allowing EVALUATION process)
 - ❖ New pricing standards (cheap)
 - ❖ New updating and downloading methodologies
- ❖ Apps can be personalized and consumed as services
 - ❖ New usability and appearance standards
 - ❖ Location and context aware
- ❖ Personal storage (high reliability)

21st century Israel (ME) more educated, tech savvy

LOB employees/customers are highly educated
Most of them understand technology

BYOEverything: new “generation” of ME tools

❖ “generation” of “ME” or ***workforce of nomads***

- ❖ rely on themselves
- ❖ come together as needed
- ❖ use a wide range of resources
- ❖ variety of locations

❖ ***Nomadism (ME)*** accentuates the ***importance of the tools***

- ❖ each person's individual ***strengths vary, so do their tools***
- ❖ This phenomenon is by no means unique :
 - ❖ ***tradespeople*** (i.e.: contractors and chefs) use their own tools because of the ***perceived better fit, quality, and/or feel.***
 - ❖ ***Software, computing devices, and the like are the 2013 worker's equivalent.***

Four “ME” Platforms

NOT AN ELEMENT OF NATURE

PEOPLE ARE CONFUSED AND CONCERNED WITH THE CLOUD.

BUT USE IT EVERY DAY

Facebook changed the DC industry : Open Compute Project

- ❖ **Open Compute Project**: internet/cloud companies working collaboratively to come up with a better motherboard design, a better power supply based on Intel or ARM chips.
- ❖ **Facebook** donated hardware designs to the ***Open Compute Project*** , showing how it had significantly cut costs with a new breed of slim-down gear purchased directly from manufacturers in Asia.
- ❖ **Rackspace** : (second only to Amazon in the cloud computing game) donated designs to the ***Open Compute Project***.
 - ❖ Rackspace's hardware accommodates a different power system than Facebook's gear.
 - ❖ The server includes an extra network connection and some extra management tools. And it's designed to handle a much larger number of connecting cables
- ❖ **Google and Amazon** have also bypassed big-name server makers going directly to more nimble manufacturers, but they've not donated their designs

.....yet.....

Top Barriers to Open Source Selection

Top Barriers to Open Source Selection

On-line trust is the key for the Share Economy

SOURCE: CAMPBELLMITHUN, CANYONVIEW; BASE: 383 RESPONDENTS

CAMPBELL MITHUN CampbellMithun

On-line trust is the key for the Share Economy

Only where there is trust, there can be collaboration and value.

“You will never get one big chance to be trusted in your life, only millions of small ones.”

- David Horsager

- "One at a time" -

The Free-Agent (ME) Economy

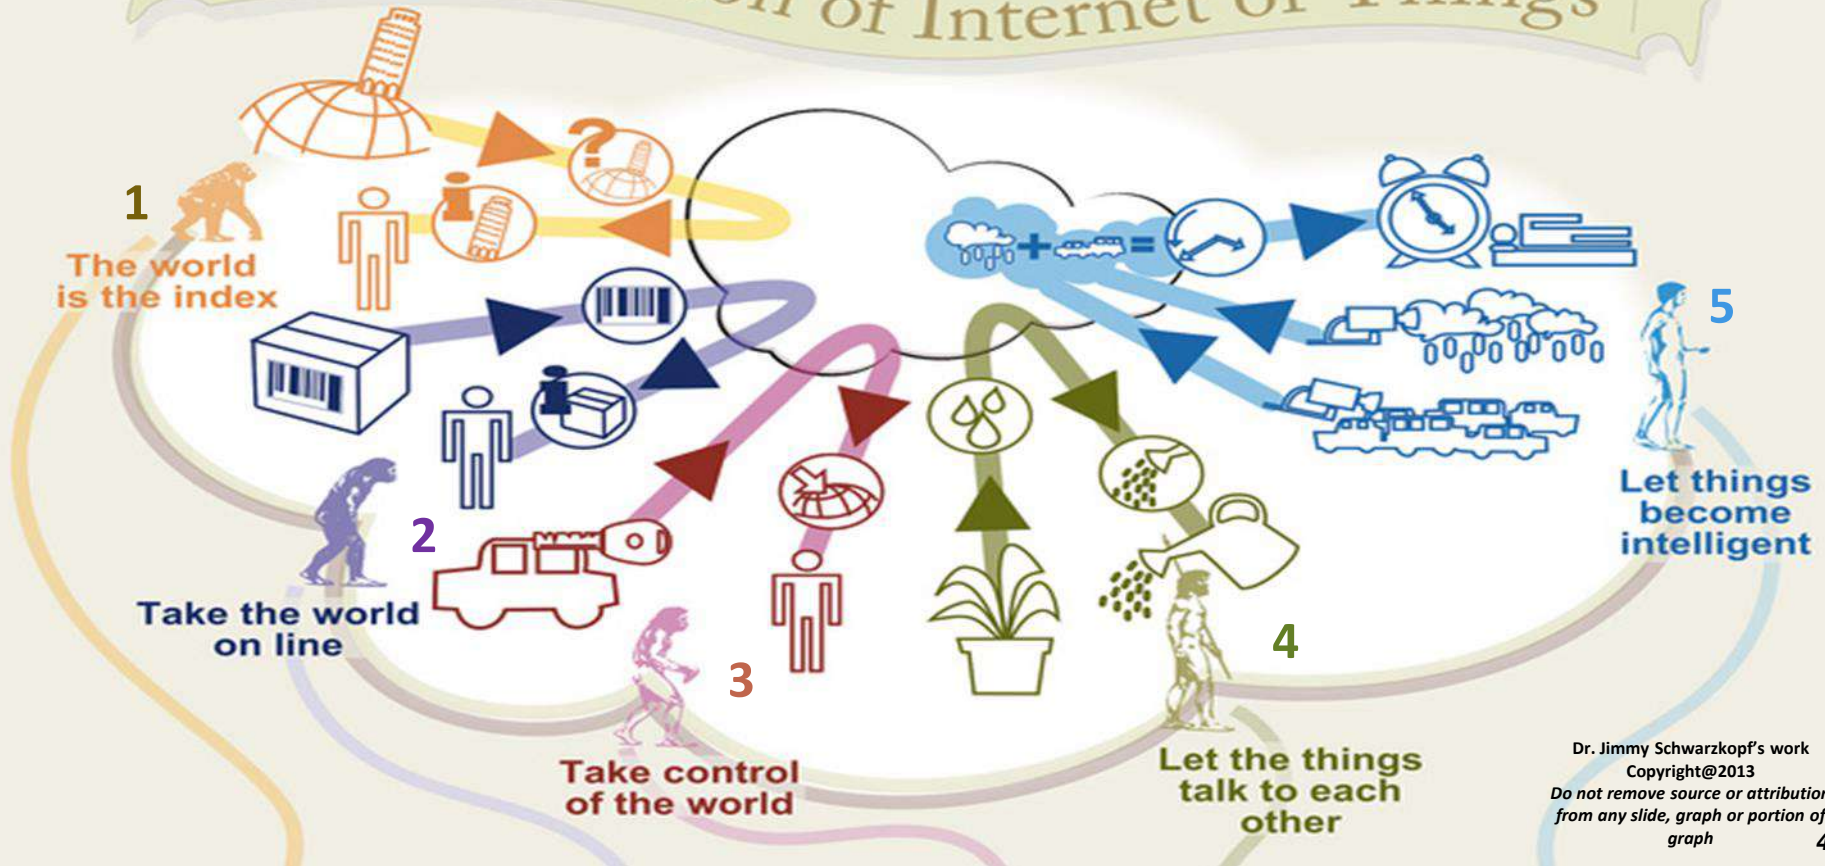

- ❖ **Everyone can become an agent or a service provider**
- ❖ **“Software Products” are the new economic drivers** (startups)
- ❖ **“Dial It Up And Dial It Down” economic model**
 - ❖ **Rent the means of production** instead of owning them
 - ❖ **Contractor “farms”** in developing countries (software development and testing PaaS)
 - ❖ **Developers** that **have staff jobs** at bigger, established companies
 - ❖ **Cloud** based infrastructure (IaaS and PaaS)
 - ❖ **Web-based resources** (BPaaS and SaaS): support call center, travel , HR, accounting and administrative tasks
- ❖ **Telecompanies:**
 - ❖ **Video or instant message** based “meetings”

CASALEGGIO ASSOCIATI
STRATEGIE DI RETE

The Evolution of Internet of Things

Internet of things (sensor/computer to computer)

❖ "Always On" world around us

- ❖ Cheap, smart, small, image recognition, augmented reality
- ❖ Near Field Communication and location aware sensors

❖ Everything gets connected

- ❖ Not only “personal” devices but “business” devices flourish
- ❖ *Real-time decision support for customers and employees*

Birth of *CONNECTEDNESS* as an IT metric

❖ Enterprises/institutions and their products/services will be evaluated:

- ❖ on how connected they are
- ❖ on the value that accrues from those connections

❖ IT is responsible for this **"DIGITAL STRATEGY"**

- ❖ Some IT departments are "linking things," or at least "thinking about linking things."
- ❖ But few have a strategy in place to fully exploit the emerging connectability associated with the Internet of Things.

Birth of the “Always Addressable” Customer

- ❖ Owns and uses **at least 3** data connected devices
- ❖ Accesses the **Internet multiple times per day**
- ❖ Goes **online from multiple** physical locations
 - ❖ (home, work, in the car, and while shopping)

Every generation has its Always Addressable Customers

Base: US online adults

Are we in a “ME” transforming economy ?

?

"It won't happen to us."
The next industry to fall

?

"It won't happen to us."
The next industry to fall

CIOs need to understand the law of the business jungle:
“disrupt or be disrupted”
and **help** their companies **survive** industry disruption

Not less than Steve Jobs

Not less than Steve Jobs

❖ Business is accelerating, customers are impatient and the market is unforgiving.
❖ It requires people that understand and are able to move at the speed of the market.
❖ It requires IT services that move at the speed of these people.

Books

Infrastructure Computing Services

Three trends make up most of the IT disruption:

1. The “information sharing” between:

- ❖ social networking
- ❖ mobile computing
- ❖ big data/analytics
- ❖ cloud computing
- ❖ enterprise applications (from partners and IT)

2. The consumerization of IT (CoIT)

- ❖ **DEVICES** are part of the story; **Apps** are the story
- ❖ **APP STORES** mark a shift in innovation
- ❖ enterprise requirements are no longer the market movers
- ❖ contradicts the traditional IT management methods of
 - ❖ command and control, locked-down systems, systematic rollouts, and long cycle-time application development

IT Centric vs. "ME" Centric

IT-Centric

"ME"-Centric

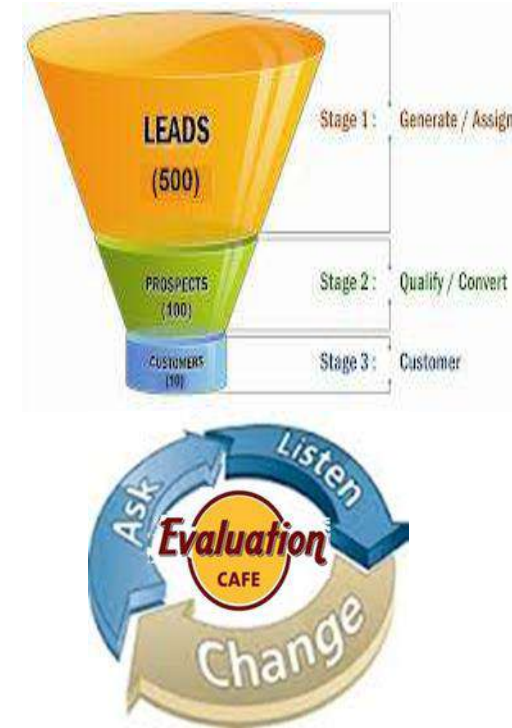

Source: Aberdeen Group.

Third trend for IT disruption : Non-stop customer

3. Non-stop customer

- ❖ The traditional marketing **“funnel”** **has lost its relevance**
- ❖ Buyers **no longer enter** a channel. Instead, they are **continuously** in the channel.
- ❖ Customers (B2B or B2C) are able to **participate online** in any and all of the components of traditional channels at the **time and place of their choosing**.
- ❖ They can **move** seamlessly between various channels and components, **both online and in the physical** worlds.
- ❖ **Evaluation**, not purchase, is the focal point.
- ❖ Even **after a purchase**, customers reevaluate their decisions, and the alternatives.
- ❖ easier than ever for **customers to change their minds**:
 - ❖ What if I can find a better deal by checking just one more place?
 - ❖ I know that the product's in the mail, but is there still time to cancel?

Non-stop Customer

traditional funnel

Nonstop-Customer Experience Model

Open content/channels
Brand-controlled content/channels

accenture

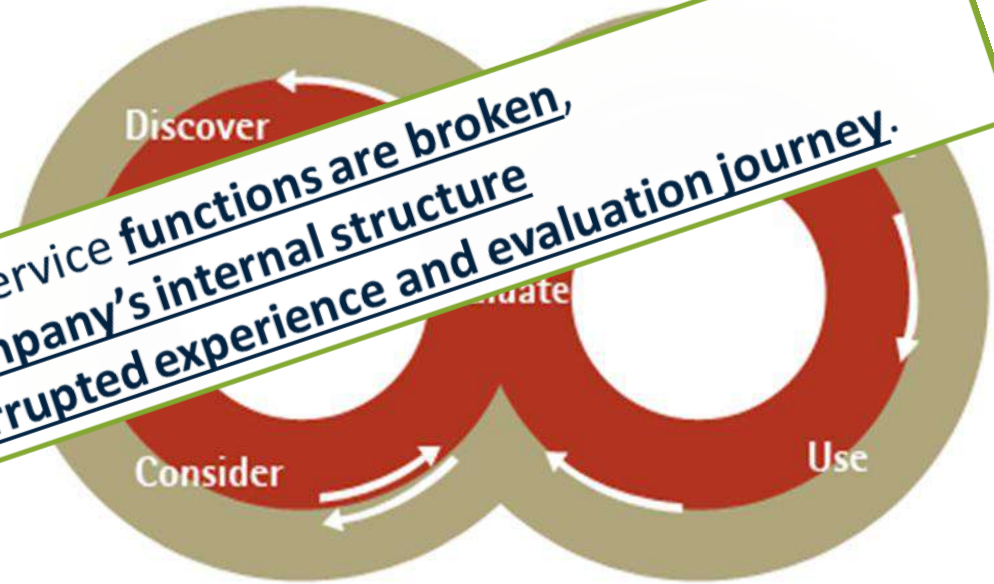

Non-stop Customer

traditional funnel

Nonstop-Customer Experience Model

Marketing, sales and service functions are broken,
representing a company's internal structure
rather than the customer's uninterrupted experience and evaluation journey.

Open content/channels
Brand-controlled content/channels

accenture

Role of technology in Customer Experience Management (CEM) ?

❖ You're a customer and you buy something:

- ❖ want it to be easy to get
- ❖ function flawlessly
- ❖ move forward in your life or business.

❖ **Customer Experience Management** is about:

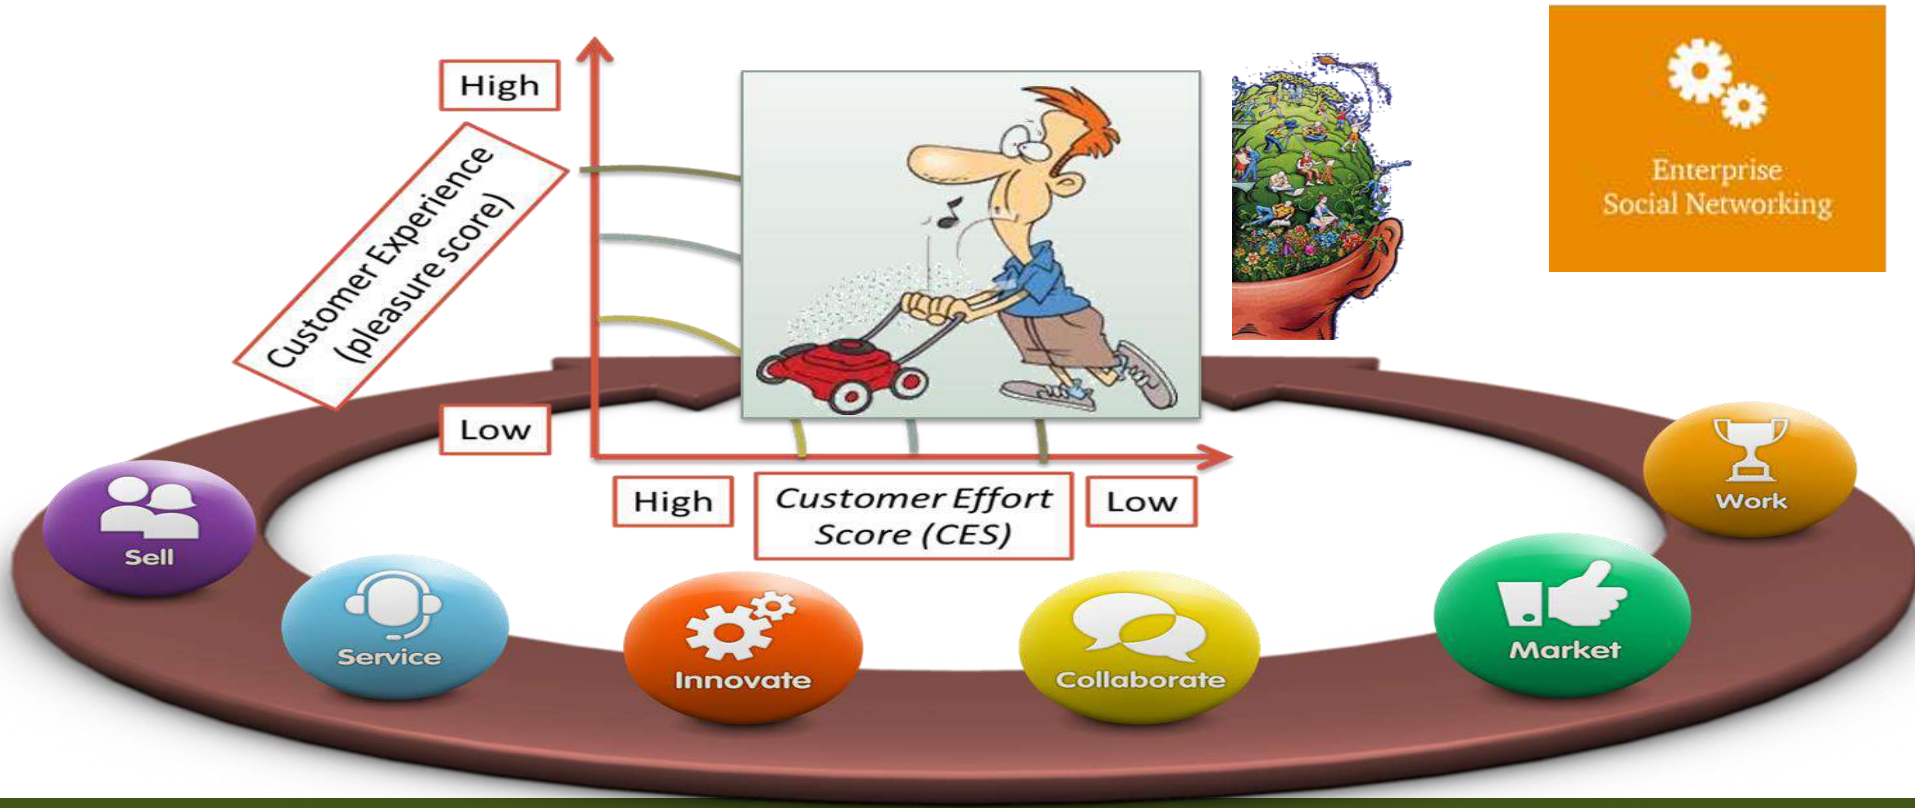

- ❖ making it easier and nicer to buy the service/product we want
- ❖ then saying good things about them and coming back

2013: "non-stop" customers

Social Enterprise defines/supports the new “non-stop” customer

Summary of the “ME” revolution

❖ Customer (“ME”) is:

- ❖ connected, always on, highly opinionated and on the move
- ❖ understands they have power and know how to use it
- ❖ they have expectations and choices if those expectations aren't met
- ❖ they have a voice, and it is loud and far reaching

❖ “ME” revolution is a “TRUST” revolution:

- ❖ more than a loyalty program, it is about earning their trust
- ❖ recognize them as more than just numbers or accounts
 - ❖ as unique human beings with a distinct set of needs.
- ❖ “ME” expects more than a product or a service, they expect:
 - ❖ be at the center of your world in a SOCIAL EXPERIENCE
 - ❖ relationship that is on equal terms:
 - ❖ they give > you get > you give > they get

IT SOLUTIONS

Prof. Snowden's "CYNEFIN MODEL"

1. In chaotic times, we cannot rely on good and best practices.
2. In times of high volatility, the best we can do is take action and observe the results.
3. Best practices are not possible in situations you've never encountered before.

Prof. Bauman's "Liquid Modernity"

1. Desire to know "what's next" is rooted in the belief that the longer the time available to develop a response to a new situation, the more manageable the situation will be.
2. Individuals have to splice together an un-ending series of short-term projects and episodes.

In chaotic times we need techniques in order to solve problems

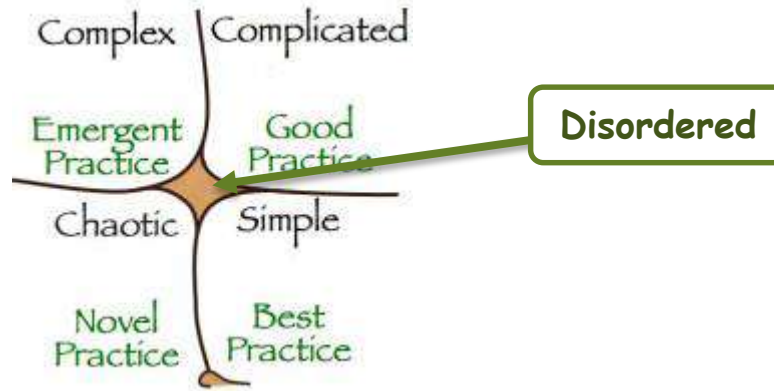

Prof. Bauman's "Liquid Modernity": series of projects

- ❖ Institutions no longer have enough time to solidify and cannot serve as frames of reference
- ❖ In liquid modernity the individual/IT management (under conditions of uncertainty):
 - ❖ be flexible and adaptable
 - ❖ be constantly ready and willing to change tactics at short notice
 - ❖ splice together an un-ending series of short-term projects and episodes
 - ❖ abandon commitments and loyalties without regret to pursue new opportunities

Prof. Snowden's Cynefin Framework: problem solving

Complexity (Cynefin)	Practices	Work Type	Skill Level	How to Achieve
Simple	Best	"Assembly Line"	Proficiency	Training
Complicated	Good	Information	Fluency	Training + Experience
Complex	Emergent	Knowledge	Literacy	Deliberate Practice
Chaos	Novel	Concept	Mastery	Deliberate Practice (10,000 hrs)

STKI Cynefin IT Framework

Big Data and Analytics applications

*Consumerization of APIs:

*Availability of many core
(industry specific) business
packages (on premises and on the cloud)*

William Proudfit, CCC 2010

New IT? Innovative CIO ?

“ Only he who can see the invisible can do the impossible. ”

❖ *Frank L. Gaines*

An ~~ARCHITECT~~ CIO should be:

An ~~architect~~ CIO should be:

- ❖ ingenious, and apt in the **acquisition of knowledge**
- ❖ a **good writer**, a skillful draftsman, versed in geometry and optics
- ❖ **expert at figures**, acquainted with history, informed on the principles of natural and **moral philosophy**,
- ❖ somewhat of a **musician**,
- ❖ **not ignorant of the sciences** both of law and physics

Deficient in either of these qualities, he cannot be a perfect master.

Marcus Vitruvius Pollio
de Architectura, ~15BC

PWC 2012: What Global CEOs Want from Technology Innovation

CEOs identify where technology is most needed—talent and customer management are critical

How great is the need to significantly improve the following areas within your organization through technology and innovation?

Base: 339–364

● Critical and immediate need ● Some need ● No need at all

Big Data Analytics

A "majority" of CEOs *think they don't* get enough information

Q: When making decisions, how important is it to have information on each of the following talent-related areas?
For those areas that are important to you, how adequate is the information that you currently receive?

Base: All respondents (1,258)
Source: PwC 15th Annual Global CEO Survey 2012

CEOs and the Board demand innovation by IT.. or else!!!

With no constraints, which part of your organization would you want to build from scratch?

Source: Accenture Institute for High Performance Future of Enterprise IT survey, August 2011

From the CEO:

YOU'RE FIRED
4 private

☐ IRRELEVANCE

☒ OBSOLETE

☐ CHANGING PRIORITIES

☐ VALUE PROPOSITION

☐ FAILED STRATEGY

☐ DATA BREACH

Why?????

Employees/users **haven't forgotten or forgiven** :

❖IT initially resisted :

- ❖ PCs, Internet, email/messaging, social media, cloud services, mobile devices, and all the other on-the-desk technologies

❖IT has taken the “police function” or build a prison around employees:

- ❖ around employees that are “not careful” with data/information
- ❖ allegedly wasting company time by playing Angry Birds or shopping online.

❖IT is responsible of:

- ❖ programming mistakes that cost a bundle (Y2K)
- ❖ disruptive ERP deployments
- ❖ periodic email outages
- ❖ red tape because of a wave of compliance and regulations (government)

IT at the crossroads: Lead or fade away

Inability to connect :

CoIT-Mobile, Social, Big Data, Cloud with the Enterprise IT
maximizing Customer Experience

*show that **old-style CIOs** will be changed*

Certain management consultant firm recently
sent a warning to CEOs :

-” remove CIOs from technology leadership ; IT isn't suited for discovering business value”-

The IT community is facing an existential decision

Miles Cole

The IT community is facing an existential decision

❖ Should IT retreat or can it evolve?

❖ *IT can retreat into the data center*, safely surrounded by servers and core systems it *manages “economically”* but away from those "end-users" that demand strategic business initiatives

❖ *IT can make the leap out of the 1960s-era data center mentality* into the 21st-century broader *strategic role advising* and enabling better business through its technology. The *promise of "digitizing" business* that IT made in the 1990s is now coming true.

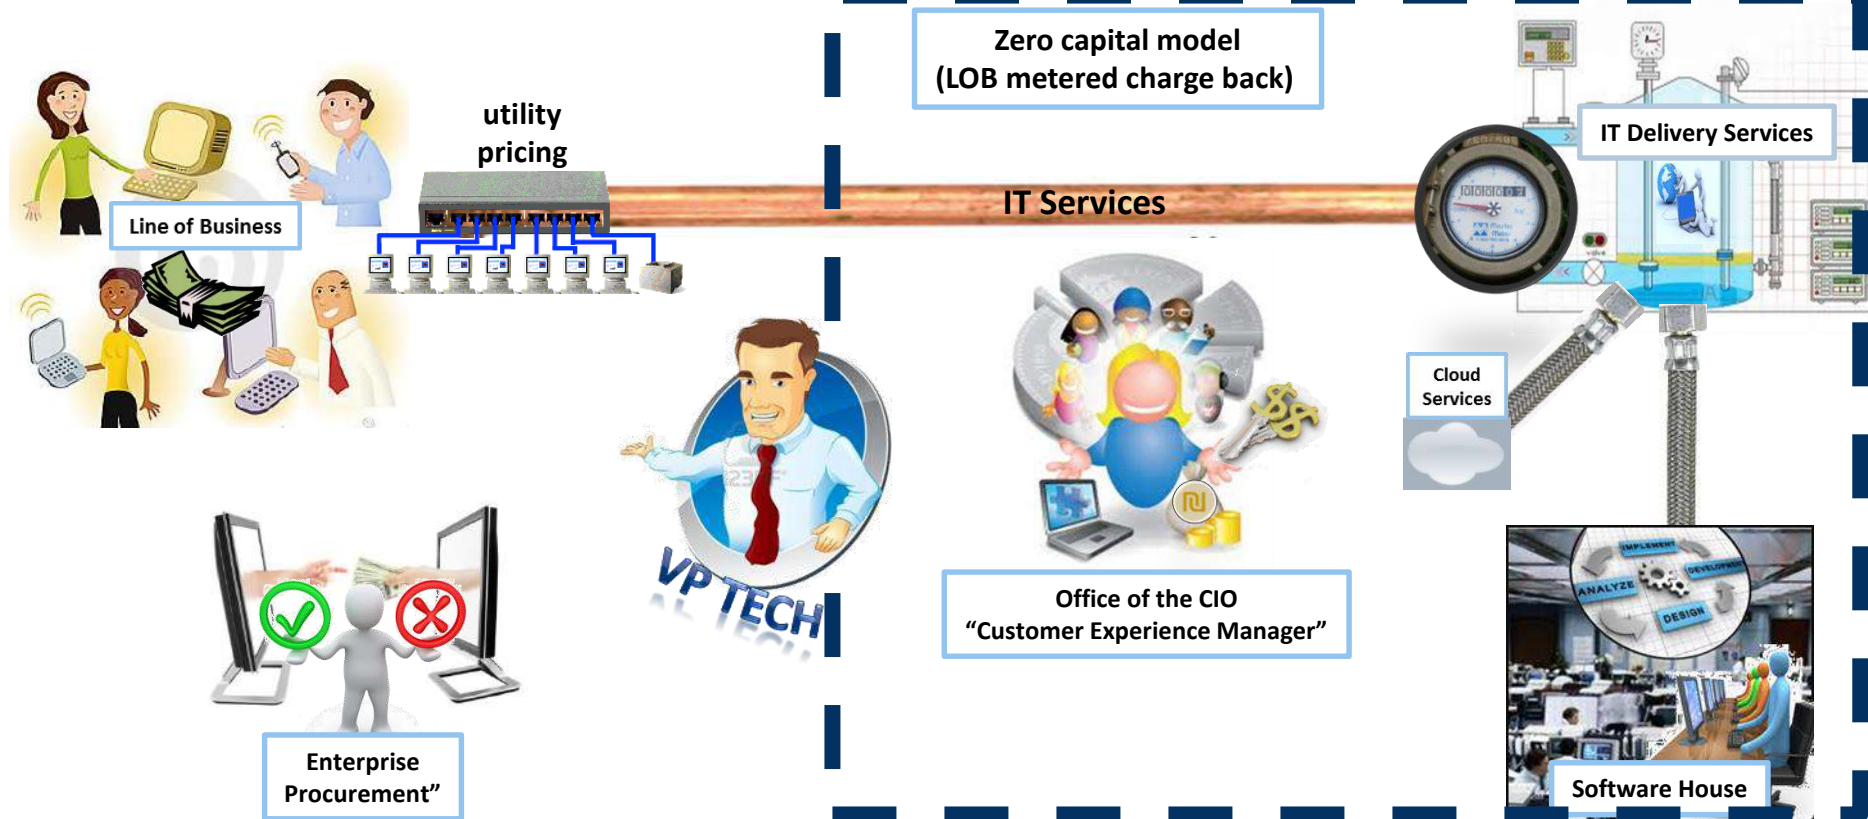

Digital conversations among C-level executives can raise Digital IQ

PwC's 5th Annual Digital IQ Survey

Strong Ties mean X4 becoming top performers

New IT Department

Who is the new CIO/VP Tech ?

An **internal strategic consultant** more like (the model) HR, Legal, Financial VPs. ←

- That will help the business move from enterprise IT project to business activity
- LOB managers will view their new CIO/VP Tech as a business enabler and improvement

Develops the 5

novation: ←

Business

As business technology (IT) becomes easier to acquire, use and manage, the traditional role of CIO/VP Tech shifts from controlling and managing to coaching and guiding.

- Leverages technology that will uncover transformative opportunities
- Develops and implements technology used by the clients of the enterprise in order to increase revenues (new business models) by defining new service touch-points:
 - M-Commerce, M-Advertising, M-Sharing, M-Payments, M-Sharing, etc.

Who is the new CIO/VPtech ?

An **internal strategic consultant** more like (the model) HR, legal, financial VPs. ←

- That will help the business move from enterprise IT productivity to business productivity
- LOB managers will view their new CIO/VPtech as a partner for business innovation and improvement

Develops the **Enterprise Digital Strategy** that builds value through innovation: ←

- Technology solutions for the LOBs and manages the business change needed (new business processes)
- Defines the “technological” space where:
 - enterprise meets the customer
 - revenue is generated
 - enterprise mission is accomplished
- Leadership in tablet efforts that will uncover transformative opportunities
- Defines and implements technology used by the clients of the enterprise in order to increase revenues (new business models) by defining new service touch-points:
 - *M-Commerce, M-Advertising, M-Sharing, M-Payments, M-Sharing, etc.*

The new CIO/ VPTech has to deliver:

Defines IT investment model

Manages the IT Department as an IT vendor

Delivers best-of-class portfolio of services
(not portfolio of systems and technologies)

DATA

(Defines Data architecture, data quality and data governance)

Supports regulation and risk management compliance

Manages operational risk, security and cyber
(for all technologies the enterprise uses)

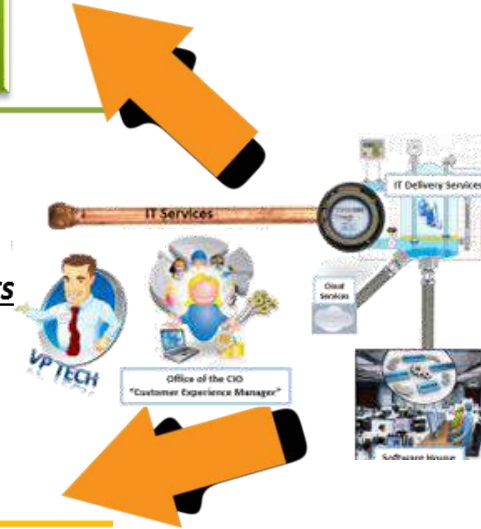

APIs: interfaces are the new top priority

IT is responsible for delivering APIs for all core systems and services.

- IT doesn't have to do all the coding anymore
- IT ***has to deliver*** standard robust and reliable ***interfaces against the core systems*** (RESTful stds)
- LOBs ***use these interfaces*** with self-generated or sourced functionality to ***create new capabilities***.
- Through this ***co-creation process***, marketing, sales, and other internal ***groups become full partners***

Delivers information services from internal and external sources

- Private and Public Clouds (connected)
- IaaS, PaaS, SaaS and BPaaS
- Packaged Software Packages

Office of the CIO

Line of Businesses

Pay per Use

OCIO

Office of the CIO
"Customer Experience Manager"

Software House

Enterprise Procurement

IT Delivery Services

Managed Services

Customers' needs

SOW

Bill of materials

Infra requirements

LOB take all/partial ownership of budgets

LOB execs will be **directly involved** in most of new IT investments

LOBs will **no longer** view technology investments as **"IT investments"**:
they will be treated in the same way as any other investment

No more investments **based only on infrastructure** requirements

Younger more IT savvy LOB **professionals driving demand definitions**

In-house **(departmental) analytics** capability

BYOEverything culture

Different way for many in IT to think:

❖ Requires IT to share ownership of risk management and technology decision making with LOBs:

❖ On the technology side, the framework favors policies, not rigid barriers, to steer employees to the right outcomes while allowing appropriate freedom and creativity.

❖ IT technology as an onion with multiple layers.

❖ The outer, employee-oriented layers should be flexible and individualized.

❖ The inner, core systems should be standardized and safeguarded as much as possible.

❖ The bad news is that not all the technology is available to manage this onion model.

❖ The good news is that by shifting responsibility from an IT only job to a shared one, IT incentivizes LOBs into project ownership.

Chargeback: a necessity by 2014

**“different”
time & materials
allocation to
internal customers!**

Eat, drink and be active
– just about everything
is included in the
holiday price

**NO more
all inclusive IT!**

**Chargeback
connected to actual
consumption**

IT procurement incorporated into the enterprise wide procurement department

- ❖ IT procurement gets a **“Bill of Materials”** from the Office of the CIO
 - ❖ RFP are managed under the “technology” umbrella of the IT department
 - ❖ Contracts are signed with a second “different” appendix:
 - ❖ The statement of work defines the scope of the agreement.
 - ❖ Contracts and SOWs should be audited regularly
- ❖ **Asset lifecycle management** :mgmt. of all hardware/software assets
 - ❖ Planning, purchasing, configuration, installation, production support and maintenance, together with decommissioning and disposal
- ❖ **Software licensing** : model of proof of ownership, administration and management of licenses (minimize shelveware)
 - ❖ involve security audits, enterprise architecture reviews, vendor analysis, compliance and regulatory checks
- ❖ **Staff-Augmentation Vendor Management:**

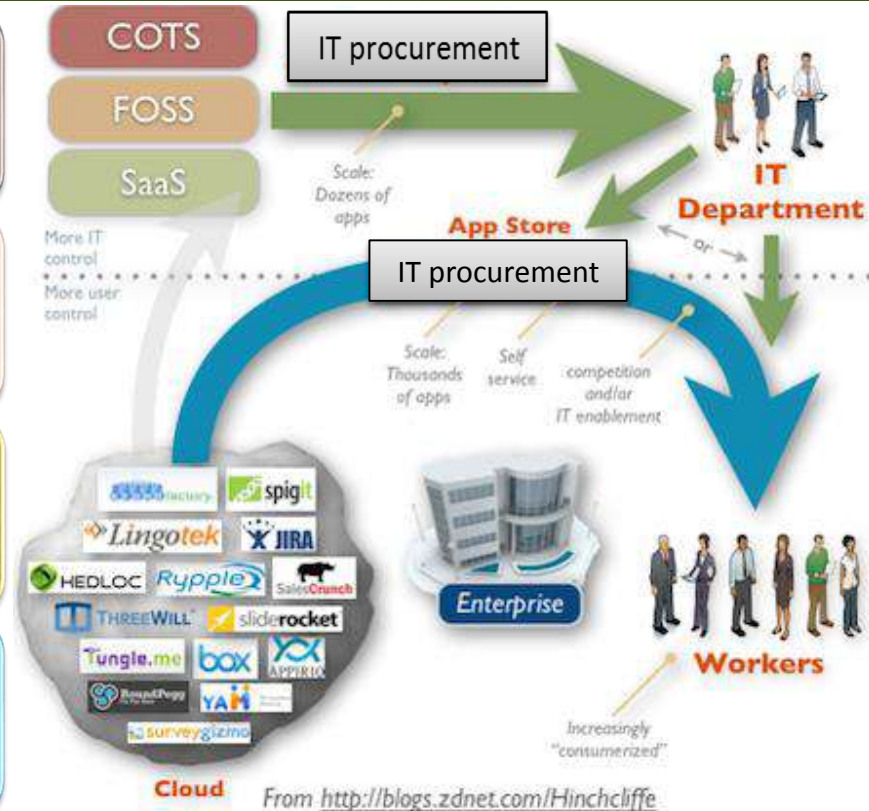

How App stores will change Software Acquisitions

Long tail of *pent-up demand* in business software that several times larger than the typical *enterprise application backlog*.

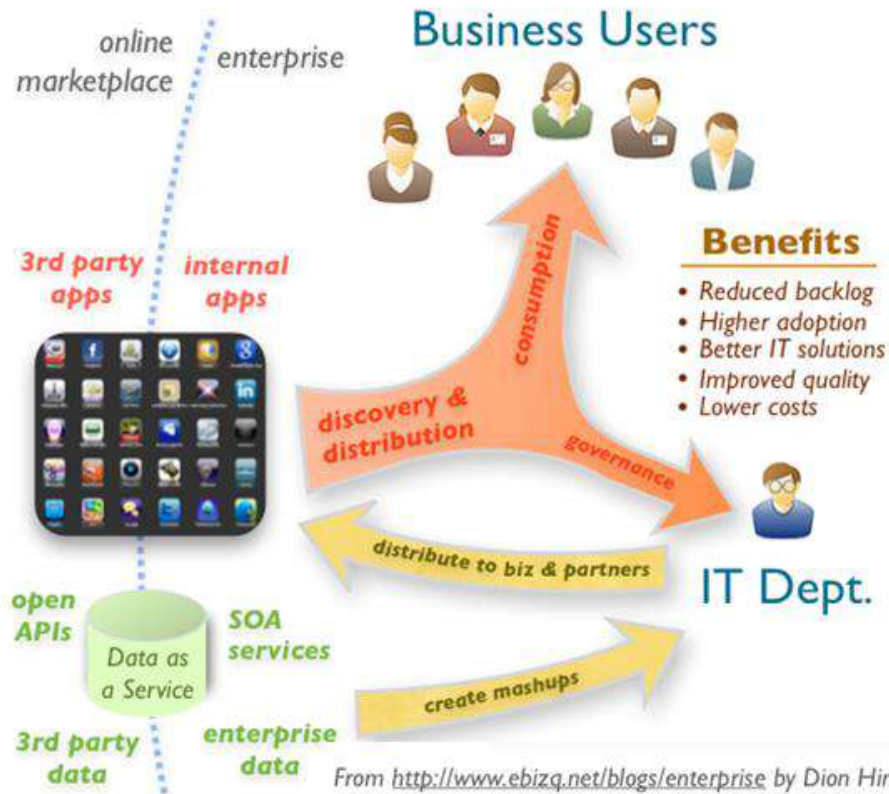

Smaller, more targeted solutions, especially at a departmental level are needed.

Users are just taking things into their own hands (up to 30% of all IT at this point) and obtaining the software they need from the cloud or their mobile devices.

Further complicating the situation is that more and more applications are also adding social media features of their own.

Enterprise App Stores that behave as “ME” App stores do

- ❖ Enables purchase, consumption and use of Apps (ME and IT)
- ❖ A must in the next 18 months
- ❖ IT does:
 - ❖ License management
 - ❖ Approve and control install/update
 - ❖ Market Manager
- ❖ App store requirements:
 - ❖ Self service install/update
 - ❖ User choices
 - ❖ Discovery/evaluation

IT Delivery Services Department

- from an infrastructure-component focused IT that is expensive to sustain and maintain
- to one focused on end-to-end service management, user experience and “fair” chargeback policies

IT Delivery
Services moves:

- Formal governance structures for operational risks.
- Automation of management and control functionalities
- Secure access of users based on location and function
- Charges for “real” metered service delivery
- Validates, audits, protects, backups data
- Validates cloud provider service levels (SLAs)

Datacenter transformation,
consolidations, vendor
management, cloud, and
application rationalization
mandate:

Space

savings

Time

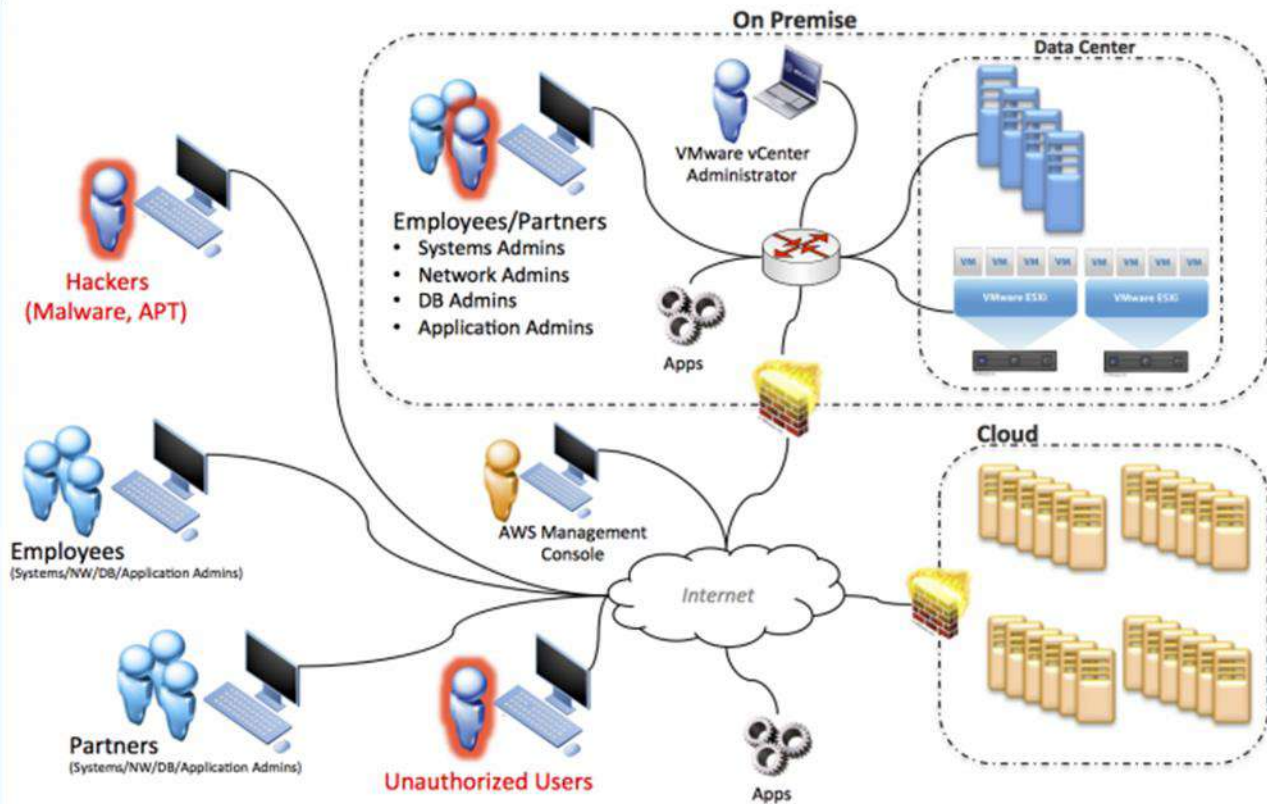

savings

Money

High priority: *Privileged Identity Management (PIM) Controls*

The “new”
Delivery Department’s
Headaches

High priority: *Privileged Identity Management (PIM) Controls*

1. User-based access control: Who owns the device?

2. Device-based access control: Trust the device?

3. Location-based access control: Where is the device?

Software House (lean development group)

Competence Centers

ERP and Core

Mobile and Analytics

Development portfolios skewed
(marketing, sales, and service):

In charge of full customer's development cycle
(Development, SysTest, Integration, Production testing)

DevOps and Continuous Delivery of solutions

Provides full auditability, rollback, reproduction, and redeployment

The CIO challenge: how to innovate FAST

❖ The CIO's agenda has transformed:

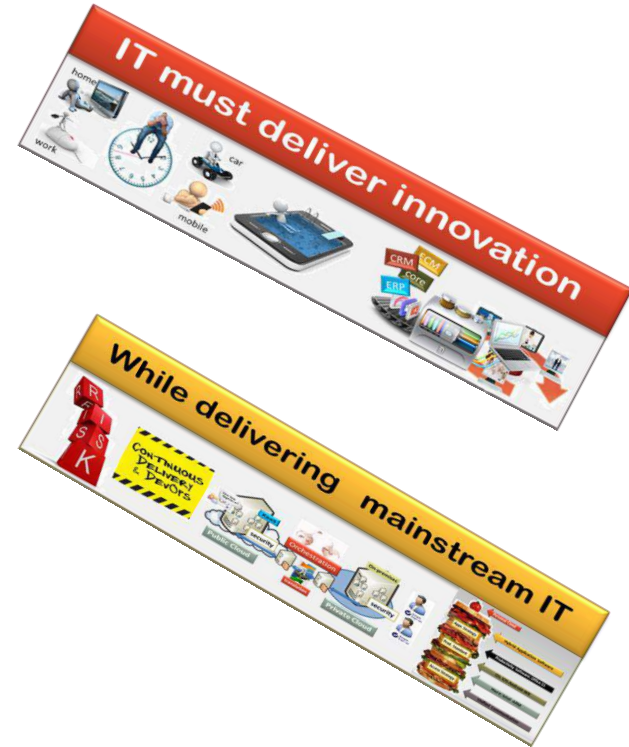

❖ from “how to keep the lights on with IT”

❖ to..... “how to innovate the business with technology”

A growing number of companies have already created competitive distinction/differentiation through the use of advanced use of technology.

Emerging and Disruptive IT Technologies

Emerging and disruptive technologies **are reshaping strategies, business models and enterprise investments.**

Each of these technologies has the **potential to be a key driver in an organization's business agenda.**

Information technology has created a data explosion

- ❖ We now record petabytes of data on what we buy, sell or even consider:
 - ❖ every click of every visitor to a website
 - ❖ every search on Google or Bing
 - ❖ every transaction at every cash register
 - ❖ every call or text on cellphones
 - ❖ every inventory change in our supply chains
- ❖ This creates a level of visibility that managers have never had before.
- ❖ It also creates enormous opportunities to use data to change the way decisions are made

Big Data: a must in 2013 ?

Big Data Mining
& Analysis

Wicked problem: Violence, force but against whom?

Violence

may be necessary for the successful
transfer of power
but against whom?

Force may be used to:

- eliminate political rivals
- to coerce resistant populations
- to purge previous rulers

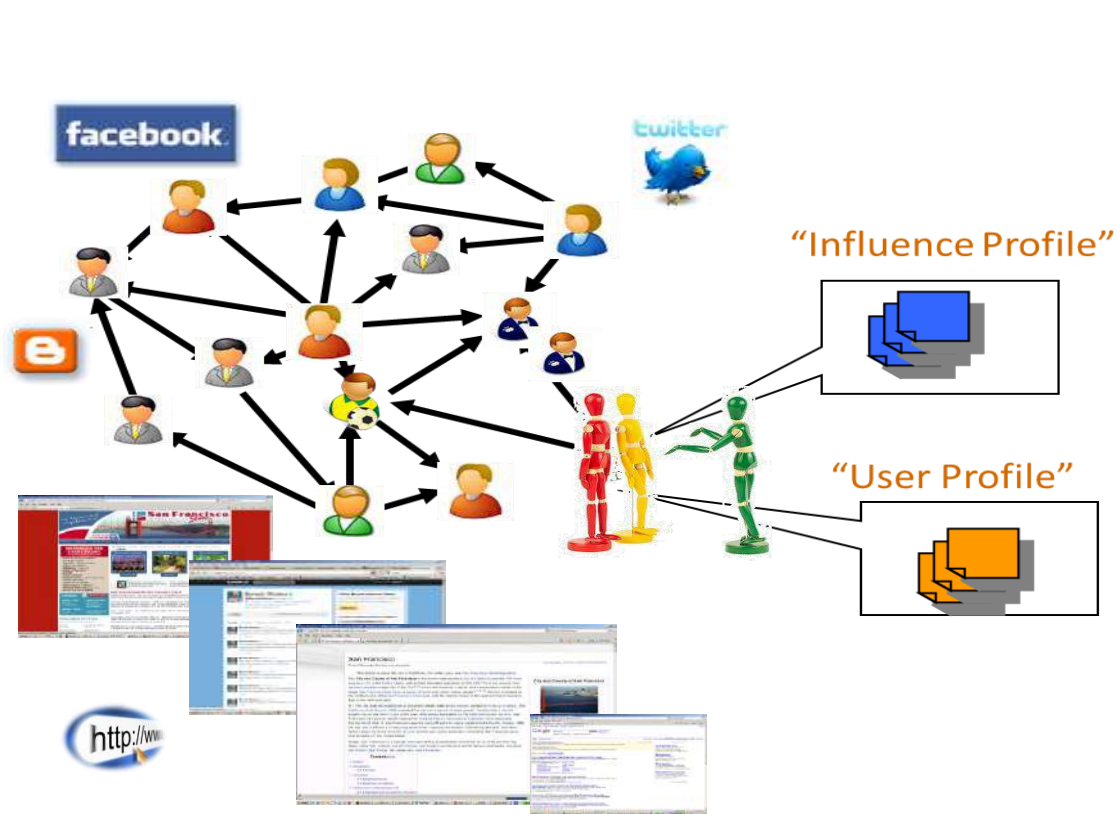

NICCOLÒ MACHIAVELLI

Wicked problem: How did the Borgia know who to kill?

Wicked Problem : marketing

Wicked Problem : Sentiment Analysis:

- What do customers think of my product?
- Are they happy with the services?
- How do I impact my customers' perception of me?
- What do customers like about my competitors?

Wicked Approach

Iterative & Explorative Analysis

Data, data everywhere - but what to do with it all?

- ❖ Enables self-service discoveries and exploratory BI by users while:
 - ❖ managing data quality
 - ❖ establishing data governance
 - ❖ creating effective "channels" for users to access and analyze the data
- ❖ Move from using analytics as a ***"measurement" tool into a decision support tool.***

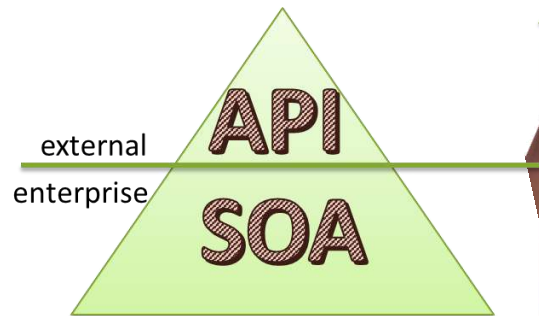

–“Instead of viewing information as a resource that resides in databases, we need to see information as something that people themselves make valuable”-

professors Donald Marchand and Joe Peppard

Common sense analytics – the analytics we need

Connectivity 2013

Personal Computing	Mobile
	Wintel
legacy apps	
ERP and package apps	
other custom apps	
Unstructured Data Apps	Mail
	ECM
Big Data Applications	
Cloud Applications	Enterprise
	Personal
Social Apps	On-premises
	cloud

The API Economy

Web APIs become like a Product in their own right and need to be nurtured

Web APIs will affect your business channel structure and you need to be aware of how

Web APIs need a business strategy

Consumerization of APIs: PERMEABLE ENTERPRISES and RESTful APIs

❖ **Early APIs** : proprietary and created interdependent coupling among pieces of code and systems.

❖ If one side of the coupling required a code change, the other side was affected.

❖ **Service-oriented architecture (SOA)**: using web services built on SOAP, has been popular within organizations as a mechanism for sharing information across the enterprise.

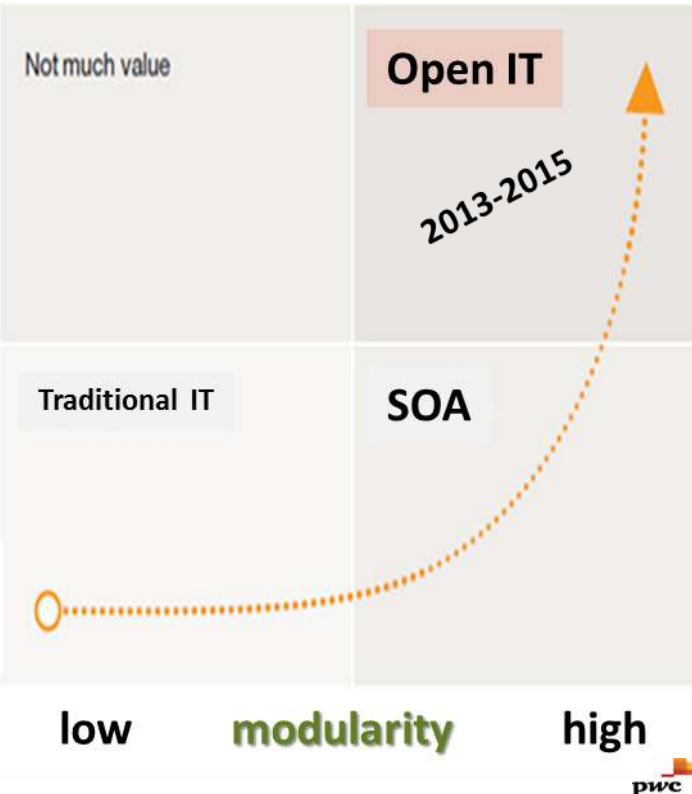

❖ **RESTful**: (representational state transfer APIs) mechanisms for “hybrid” uses (in and out of the enterprise).

❖ Twitter and Facebook are now processing API calls on the order of billions per day.

internal
&
external

Who
creates

Only
IT

The REST architectural style requires :

Client/server loose coupling:

client and server may be developed and replaced independently of each other.

Stateless:

Information about client states is embedded in the messages the clients send to servers.

Cacheable:

Clients can have the ability (and must let the server know whether they do or not) to temporarily store data received from the server.

Layering:

Servers do not know whether there are layers of abstraction between themselves and the end client (multiple security policies, APIs, etc.).

Code on demand:

Servers are able to send custom functions as executable code to clients for them to execute.

Number of APIs over time

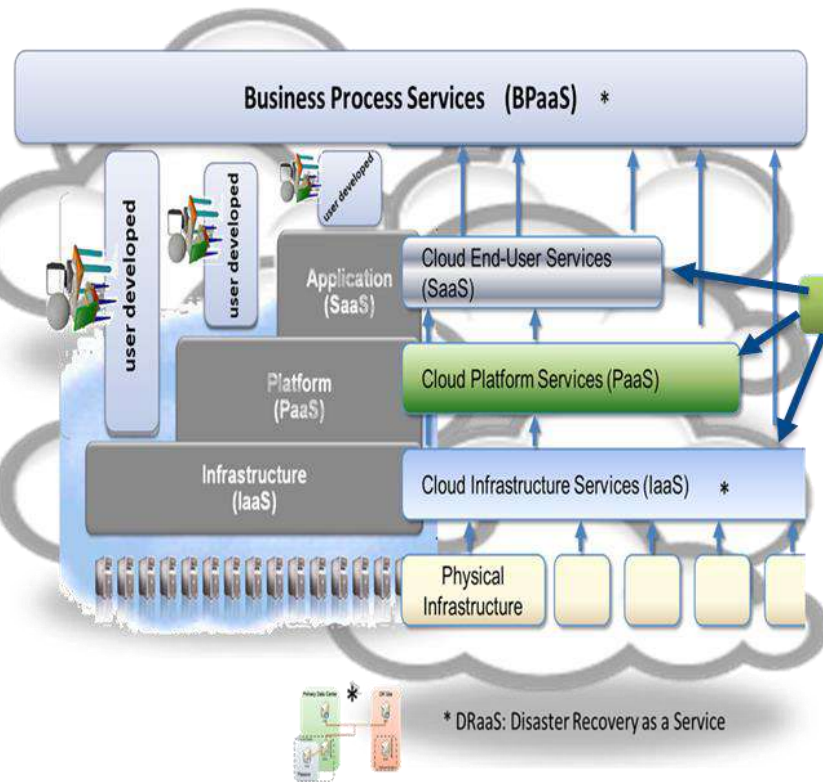

Source: ProgrammableWeb

Complexity of integration

Mobile Backend as a Service (MBaaS),

provide pre-built, cloud hosted components for developing mobile application backend

- Storage for mobile data
- **Automatic generation of REST-based interfaces**
- Internet optimized data access
- User/security management tools
- Usage analytics

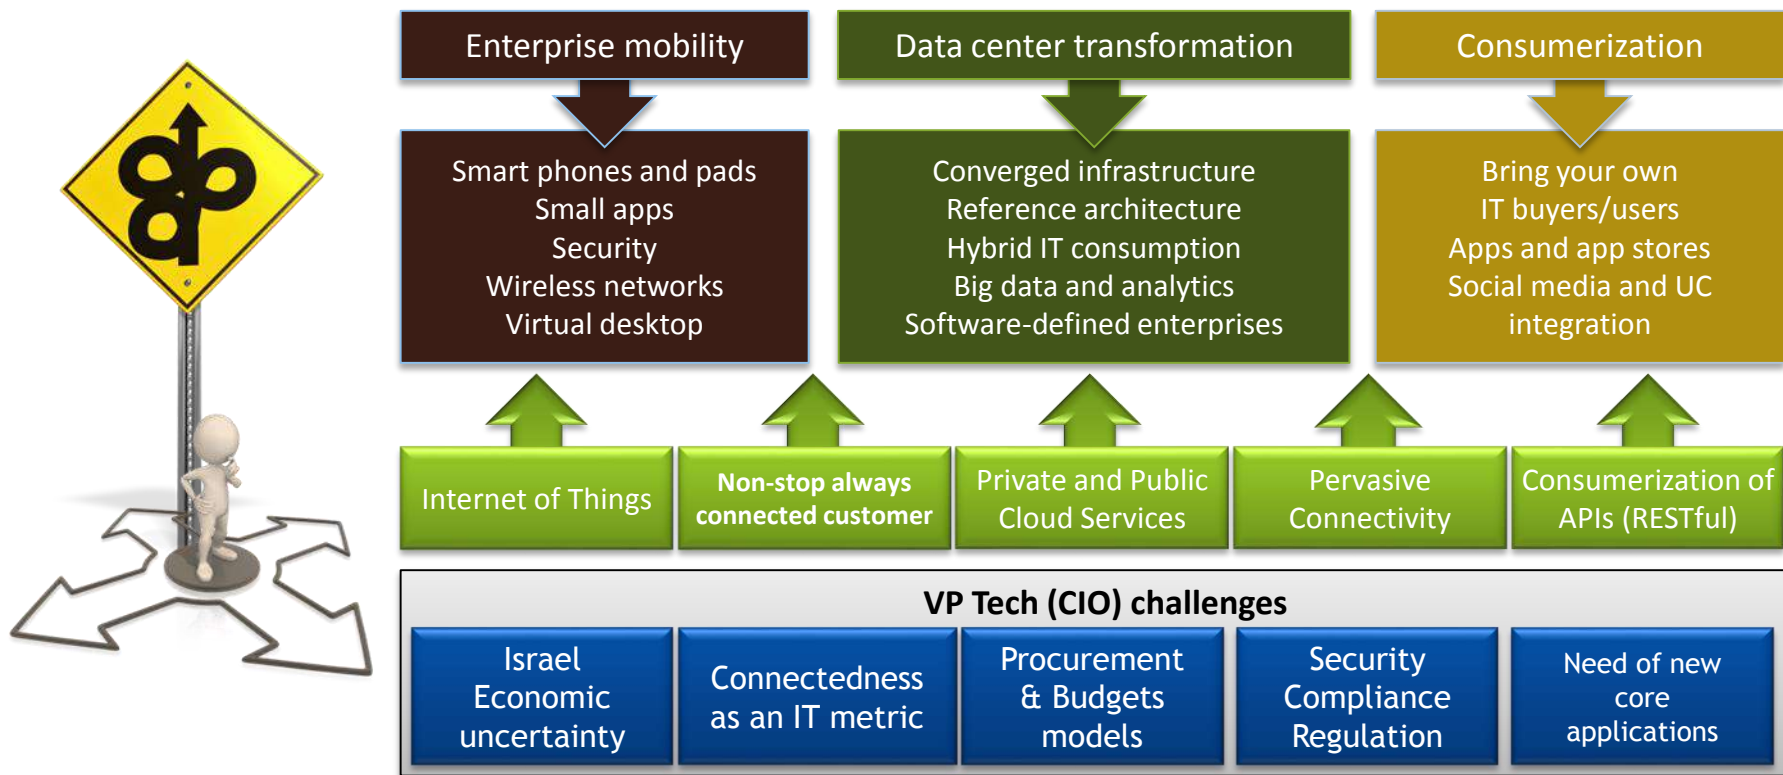

New Buzz ?

What are we responsible for?

Innovate based on transitions is key for 2013

Conclusion: Most Important Paradigm Change

How to do?

up to 2012

What to do?

from 2013
